

Chinatown Mobility Study

Evaluation of Transportation Network and Market Condition

Draft Report Nov. 3, 2020

Prepared by

Kwangyul Choi, Ph.D.

Land Acknowledgements

This study focuses on an area on the south banks of the Bow River that is currently known as Chinatown and, in part, examines the development of this neighbourhood within the larger context of European colonialization and settlement. The City of Calgary must be recognized as being situated within the traditional territories of the Blackfoot and the people of the Treaty 7 region in Southern Alberta, which includes the Siksika, the Piikuni, the Kainai, the Tsuut'ina, and the Stoney Nakoda First Nations, including Chiniki, Bearspaw, and Wesley First Nation. Chinatown, distinctly, sits near the intersection of the Bow and Elbow Rivers and the traditional Blackfoot name of this place is "Mohkinstsis". The City of Calgary, is also home to Métis Nation of Alberta, Region III.

Executive Summary

Collaborating with the City's Community Planning, Planning & Development department, the University of Calgary research team examined demographic changes in Calgary's Chinatown and its surrounding communities over time and evaluated transportation supply and demand in the area as well as some aspects of business activities. In addition, in-person and online surveys were conducted to understand transportation/mobility needs from the community and the visitors to the community.

The purpose of this report is to provide the most up-to-date information about demographics, transportation supply and demand, and consumers' travel behaviour of Calgary's Chinatown in support of the City's proposed Cultural Plan and Area Redevelopment Plan for Chinatown. This report is intended to draw relevant transportation policies based on the research findings in order to make Chinatown a great place to live, work, play, eat, shop, learn and visit.

This report consists of four main sections. The first section (Chapter 2) details the demographic and socio-economic characteristics of Chinatown and its surrounding communities. The next section (Chapter 3) briefly illustrates current business activities, and the following section (Chapter 4) presents transportation supply and demand in Chinatown, its surrounding communities, and the city. The last major section (Chapter 5) summarizes the results from two surveys (in-person and online) in regard to travel behaviour of Chinatown affiliates and visitors.

Throughout this research, we found that Chinatown and its surrounding communities have continued to grow. However, there has been a significant population growth of older adults, particularly in Chinatown. Unlike other communities in Calgary, we found that pedestrian-based transportation has been the primary mode of travel for Chinatown. Thus, it is critical to improve pedestrian facilities in the community to increase safety, comfort, and convenience for the residents and visitors while ensuring sufficient provision of transportation infrastructure to accommodate the population growth. Policy recommendations are suggested under each main section based on the findings followed by. The authors hope that the information and recommendations contained in this report will be the cornerstone of the future planning process.

However, the authors acknowledge that this study has some limitations that need to be addressed in the future discussion. Due to the interruption by COVID-19, the format of the survey had to be modified from in-person to online, which led to other modifications (e.g., questions and settings). Additionally, the perception of health risk might affect responses from the survey participants.

Nonetheless, the authors hope that this report will help the Chinatown community and The City of Calgary discuss transportation issues in comprehensive and inclusive ways.

1. Introduction

1.1. Background

Calgary's Chinatown consists of approximately 49 acres of land bounded mainly by the Bow River on the north, Macleod Trail on the east, mainly 2 ST SW on the west and 3 AV SW to the south, with a bump-out extending one block south along Centre Street South and two blocks across 4 AV SE (Chinatown Historical Context Paper, July 2018). Despite its central location and one of six Centre City communities located in close proximity to the downtown core, Calgary's Chinatown has experienced difficulties in attracting people and development while conserving its cultural identity. The City of Calgary has taken the initiative of developing and Local Area Plan simultaneously with a Cultural Plan to address the need for guidance and direction for future development while preserving and enhancing the character of Chinatown.

In 2016, the City of Calgary had a Toronto-based consulting firm undertake a Chinatown Business Vitality Study. While a working copy final draft was received in September 2016 several Chinatown community stakeholders objected to the methodology and findings, and the report was never finalized. Although the draft study provided a clear snap shot of the condition in Chinatown at the time of the study, the report contains some limitations that have not allowed the City to advance and develop appropriate policies on public realm, urban design and mobility. For instance, the report only gives an idea how Chinatown looked like during the most vibrant time of year (summer). Additionally, the report did not take into account the historical changes that have affected Chinatown over the past decades. Finally, the draft report, pays little to no attention to transportation and mobility aspects of Chinatown, which was supposed to be crucial for a community to be vibrant.

This research project emerged in collaboration with the City's Community Planning, Planning & Development department and was designed to identify gaps that the City particularly wants to address in order for them to develop appropriate transportation/mobility policies for all modes of transportation.

1.2. Study Objectives

Focusing on demographics and businesses and transportation supply/demand of Chinatown, we completed the following three objectives.

Objective 1 – Analysis of Changes in Population and Community Trend for Chinatown

The first part of the study involves a comprehensive understanding of the changes of Chinatown and the surrounding communities over the years. We described who has lived in the study area (i.e., demographic composition), what types of residential properties have been there, and what types of businesses, facilities, and amenities are available. Extensive data from several decades were gathered from The City of Calgary and Statistics Canada to understand how Chinatown and the surrounding communities have transitioned over the decades.

Objective 2 – Analysis of Current Supply/Demand of Transportation Network and Parking

The second part of the study focuses on the understanding of the transportation supply and demand of the study area. The City's Community Planning, Planning & Development department provided us with their geodatabase, and we created thematic maps using the spatial data in the database. We described various aspects of transportation—network, volume, service coverage, and parking—by four (4) modes of transportation—walking, bike, transit, and auto.

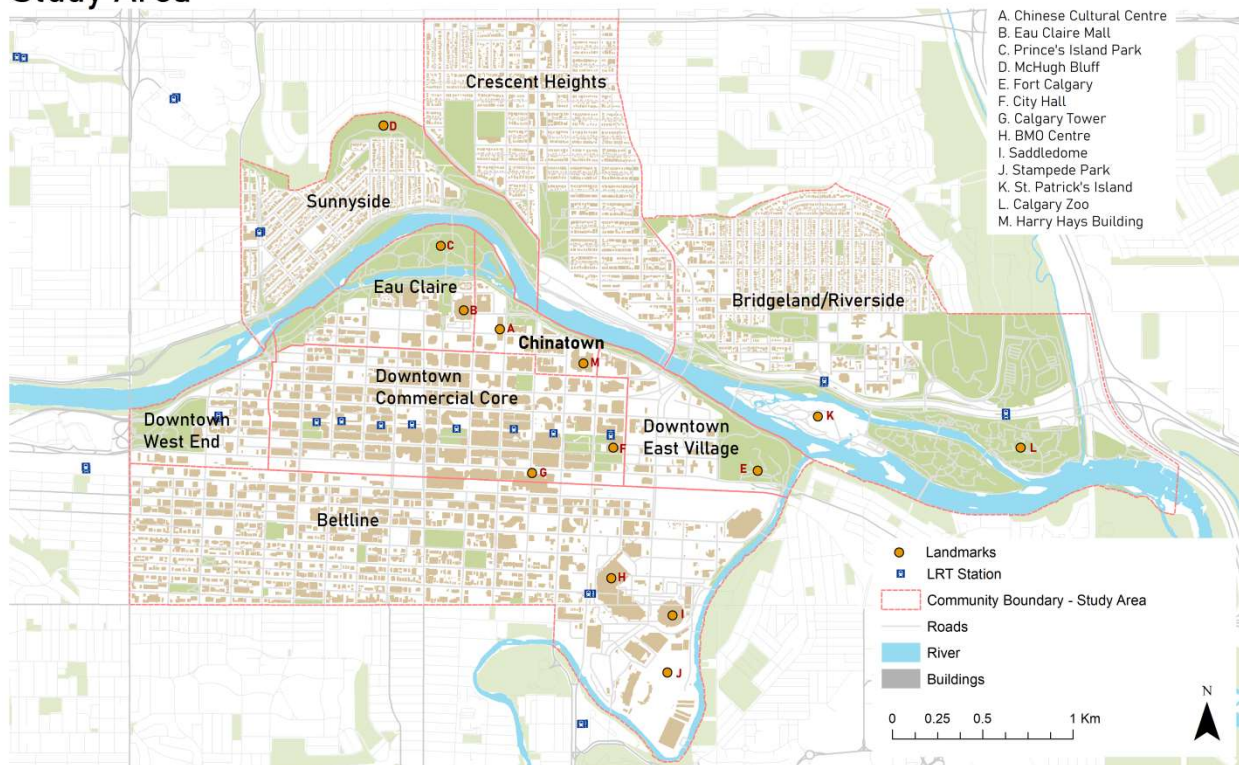

Objective 3 – Analysis of Consumer/Business Activities with a Focus on Mobility

For this objective, we conducted two surveys—in-person and online. Three sets of in-person surveys were initially planned over the course of project to reflect seasonal variations. Each set of the survey was supposed to consist of two surveys—weekday and weekend. We completed one set of in-person survey in November, 2019. However, on March 11, the World Health Organization (WHO) declared COVID-19 a pandemic. After considering several options, we made a transition from an in-person survey to an online survey. The online survey began at 11:00AM on Monday, May 25 and remained available online for the next three (3) weeks

(ending on June 14). In both surveys, we examined who (consumers), why (purposes), and how (modes of transportation) as well as when and where people come to Chinatown. Additionally, we tried to understand how they travel around the Chinatown.

1.3. Study Area

Study Area

The study area consists of nine communities with Chinatown as the primary study area and eight neighbouring communities as the context area, which are within a 30 minute-walking (2,400 m) distance from the centre of Chinatown. Chinatown is located at the heart of Calgary, surrounded by Eau Claire to the west, Bow River to the north, East Village to the east, and Downtown Commercial Core to the south. Downtown West End, Sunnyside, Crescent Heights, and Bridgeland/Riverside are also located within the walking distance. A significant portion of Beltline is within the walking distance.

Community Name	Community Code	Distance from Chinatown (km)
Chinatown	CHN	-
Downtown Commercial Core	DNC	0.9
Downtown East Village	DNE	1.2
Eau Claire	EAU	1.3
Crescent Height	CRE	1.6
Sunnyside	SSD	1.8
Downtown West End	DNW	2.2
Bridgeland-Riverside	BRD	2.2
Beltline	BLN	2.8

Key landmarks in the study area include the Harry Hays Building and Calgary Chinese Cultural Centre within Chinatown community and Calgary Tower, City Hall and Fort Calgary in the neighbouring communities. The rest of this report will address the demographic changes and transportation network in the study area.

The rest of the report is divided into five (5) chapters. Chapter 2 illustrates the demographic characteristics of the study area, and Chapter 3 shows businesses in Chinatown. While Chapter 4 presents transportation supply and demand of the study area, Chapter 5 summarizes the results of two surveys. This report ends with a conclusion with a summary of the main findings and policy recommendations.

2. Demographics

An analysis of the demographic makeup of Chinatown and the surrounding communities is vital to understanding the characteristics of the residents of Chinatown and recommend policies that will best benefit them. We used a combination of Canada's national census data and Calgary's civic census for the analysis, drawing data from both the Statistics Canada website for the national census and the City of Calgary's Open Data portal for the civic census. The national census is conducted every 5 years starting from 1971; any data from the years 1971, 1976, 1981, 1986, 1991, 1996, 2001, 2006, 2011, or 2016 was retrieved from the national census. The City of Calgary's civic census is conducted every year and is presented in this report for every year that the national census was not conducted.

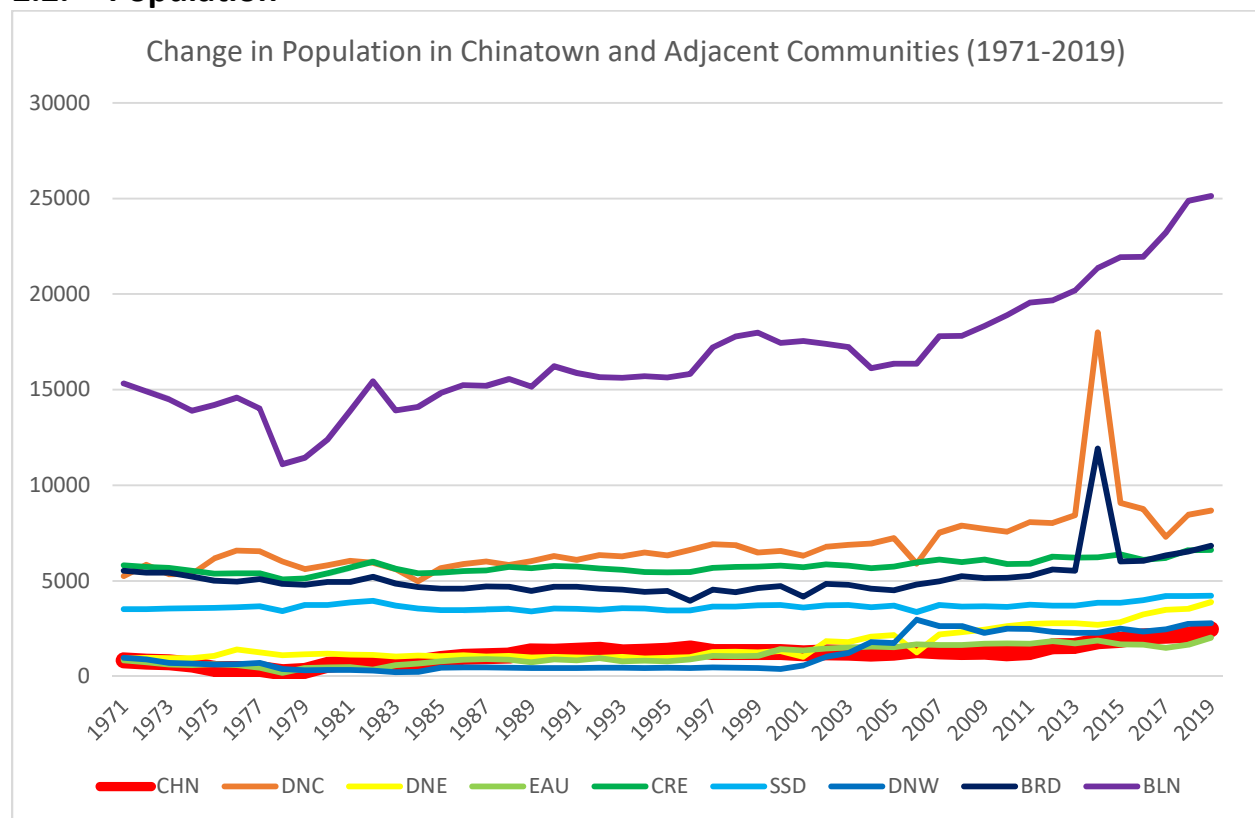

Following a thorough analysis of the demographic data we have provided a series of recommendations for the development of policies that would support the desirability of Chinatown as a destination and as a place to live and conduct business. The summary of policy recommendations below is followed by the detailed demographic data analysis.

2.1. Policy Recommendations

- Overall, every community is seeing an increase in population. Policy recommendations should be cognizant of these growing communities and ensure that transportation infrastructure can sufficiently accommodate the increasing population. **(section 2.2)**
- Residents can be valuable customers/users of the community. Policy should support residential development in the community and communities nearby. **(section 2.2)**
- All policy recommendations should be inclusive of and consider the safety and wellbeing of all age groups and all genders. **(section 2.3 & section 2.4)**
- Specific to Chinatown, policies should pay a special attention to the older adults. For other communities, policies should accommodate the needs of all demographic groups, particularly those the ages of 25 and 44. **(section 2.3)**
- Policy recommendations should keep in mind that historically Asian communities like Chinatown are slowly becoming home to a multitude of ethnic groups and shouldn't cater to just the majority ethnic group in the community. **(section 2.5)**

- While the composition of languages has changed over time, Asian-based language continue to be the majority. Signs with these languages can increase the sense of community. **(section 2.6)**
- While household income has increased overtime it remains in the lower range in comparison to the rest of the city. This needs to be considered when new housing is proposed to provide a diversity of housing units and consider affordability. Gentrification is a real concern and should be avoided. **(section 2.7)**
- The majority of population commutes to work by walking. Policy should support improvement of pedestrian facilities in the communities to increase safety, comfort, and convenience. **(section 2.8)**

2.2. Population

	1971	1976	1981	1986	1991	1996	2001	2006	2011	2016	2019	Change (1971-2019)

-----	-------	-------	-------	-------	-------	-------	-------	-------	-------	-------	-------	-------

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

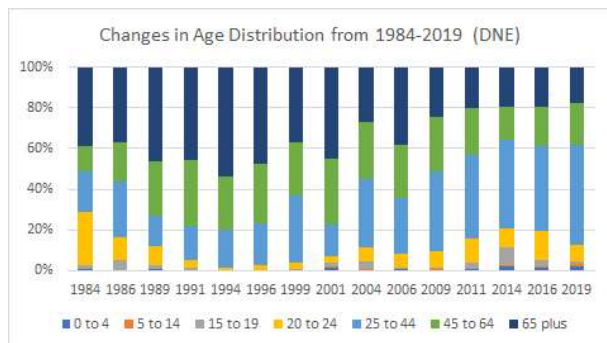

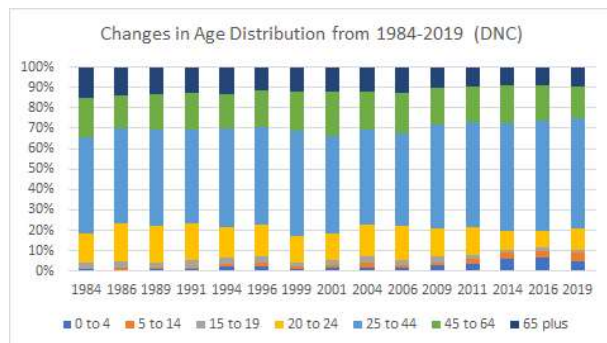

With a current population of 2,471 (as of 2019), the population in Chinatown has increased by 191.74% since 1971. Historically, Chinatown has had a lower population than the surrounding communities but has steadily increased since 1971. Today, the population of Chinatown is comparable to that of Downtown West End. Like Chinatown, the surrounding communities have also increased in population with the Beltline being the most populous of all the communities in this study with a population of 25,129.

2.3. Age

Today, residents between the ages of 25 and 44 make up most Chinatown's residents, comprising 44.3% of the population. The next largest age group is the 65 plus group, comprising 28.1% of the population. Historically, the census data shows that between 1984 and 2004, the proportion of 65 plus residents increased until they comprised most of the population of Chinatown. Since 2004, the 25-44 age group has increased to make up the majority of Chinatown's residents. There is currently a considerably larger proportion of senior residents (65 years and older) as compared to the surrounding communities. As of 2019, senior residents comprise 28% of the total population in Chinatown. However, this is not a novel observation, as every year in the graph shows that senior residents comprise a considerable portion of Chinatown's population. Since 2009, there has also been an increase in the number of residents

between the ages of 25 and 44. A similar trend is also observed in the Downtown East Village, which saw an increase in residents ages 25 to 44 since 2016. These increases might be attributed to increased development and more affordable shelter costs (*see section 3.10.2 Monthly Rent*) in these communities as opposed to the other inner city communities. In contrast to the trends observed in Chinatown, the neighbouring communities (except for Downtown East Village) saw either a decrease or no change in the number of residents aged 25 to 44 and 65 plus. For all communities, the proportion of residents ages 24 and under has consistently comprised the minority of the population of the community.

Presently, female residents comprise 51% of the population in Chinatown. Since 2016, the census data shows that the ratio of males to females in Chinatown has been approximately 1:1. The data shows that previously, there were more female than male residents, particularly

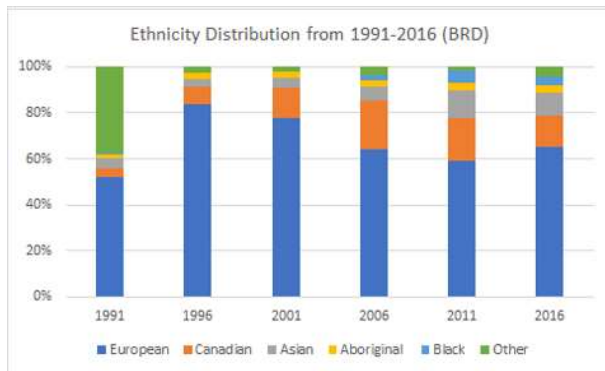

between 1991 and 2011. This is consistent with the fact that females tend to have slightly longer life spans than men (World Health Organization, 2020) and that Chinatown is also home to many elderly residents. A higher proportion of female than male residents is also generally the case for its surrounding communities as well, except for Beltline, Bridgeland/Riverside, Downtown East Village, and Downtown West End, where there are consistently more male residents than female.

2.5. Ethnicity

In this section, the data shown represents the ethnic origins of residents of Chinatown and surrounding communities. For clarity, ethnic origins have been defined as follows, based on the Statistics Canada Census Dictionary:

- **European:** Comprises individuals of British Isles, French, Western European, Northern European, Eastern European, Southern European, and other European origins
- **Canadian:** Comprises individuals who are not of North American Aboriginal origins but consider themselves to be of Canadian origins
- **Asian:** Comprises individuals of West Central Asian, Middle Eastern, South Asian, East, and Southeast Asian origins
- **Aboriginal:** Comprises individuals of North American Aboriginal origins, including all First Nations, Inuit, and Metis
- **Black:** Comprises individuals of Central and West African, North African, Southern, and East African origins, as well as those who identify themselves as Black without further specification
- **Other:** Comprises individuals of Caribbean, Latin/Central/South American, Oceania, and Pacific Islands origins

Historically, the residents in Chinatown have been primarily of Asian descent, with residents of other ethnicities contributing only a small percentage of the total population. Chinatown has the highest proportion of Asian residents of any of the communities that were included in this analysis. However, the 2016 census data shows that there has been a considerable increase in the proportion of residents of European descent living in Chinatown. As of 2016, residents of Asian descent comprise 56% of the total population in Chinatown (as compared to 1991, where residents of Asian descent comprised 88% of the total population). In the surrounding communities, the proportion of residents of European descent decreased between 2001 and 2016.

2.6. Language

The census data shows that Asiatic languages are, and historically have always been, the most common language spoken at home by residents of Chinatown, which differs from its adjacent communities where English is the most common language spoken at home. Today, the proportion of residents speaking Asian languages at home in Chinatown has decreased since 2001 and the proportion of residents speaking English at home has increased. The data also shows that Asiatic languages, while not the majority, comprise the second most-spoken language at home in all of the adjacent communities.

2.7. Income

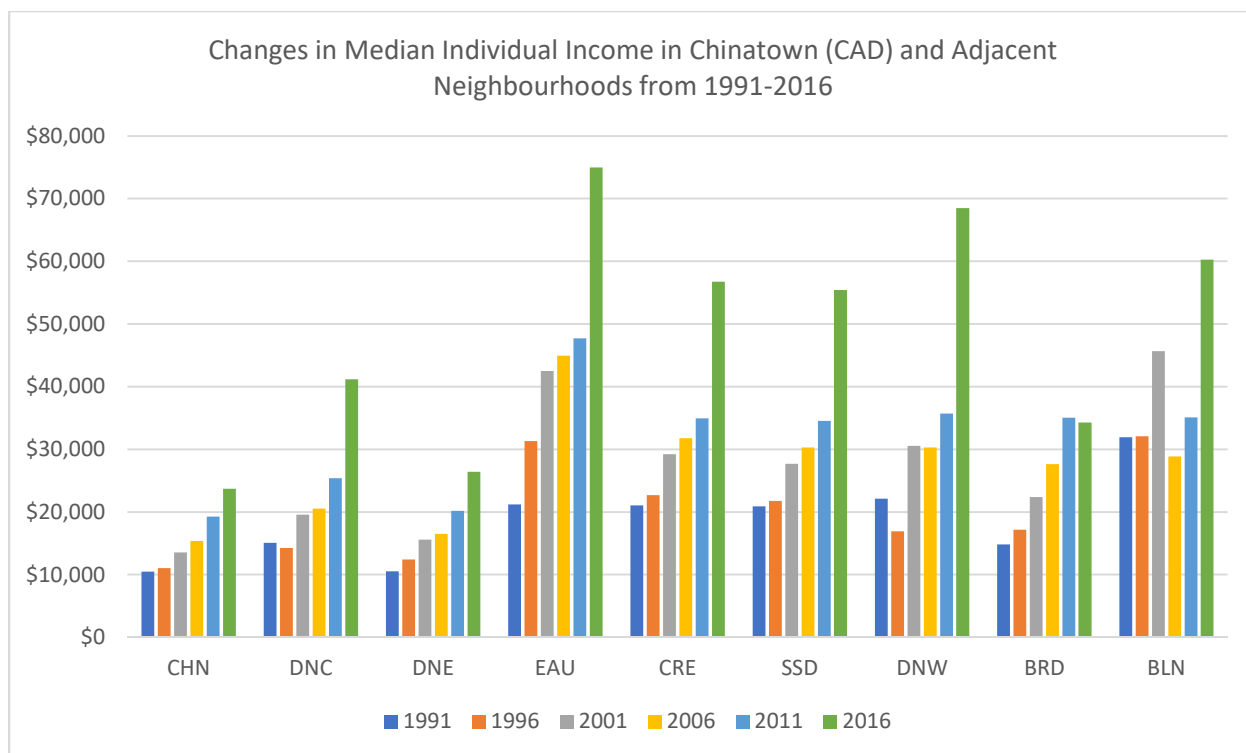

The average and median incomes (both individual and household) in Canadian dollars are presented below as part of the demographic analysis. Although the average is a commonly used statistic to represent the middle of a dataset, it can be heavily influenced by outliers (that is, extreme highs or lows), especially with regards to income. As such, the median individual and household income is also presented to represent the “true middle” of the dataset.

BLN	56,239	48,801	67,803	43,087	48,441	76,408	35.86%

Although it has increased since 1991 by 231.58% and 126.73% respectively both average and median individual income in Chinatown has remained relatively low as compared to the surrounding communities. A similar trend can be observed in household income, where the average and median income have increased by 317.74% and 123.44% respectively but remain lower compared to the surrounding communities. This could be because there is a notable senior population in Chinatown, so these residents could be retired and are no longer reporting an annual income. However, it is worth noting that despite the considerably low reported individual and household income, the average rent cost of a dwelling in Chinatown is like that of the adjacent communities (*see section 3.10 Dwellings*).

2.8. Mode of Transportation to Work

Since 1996, walking has been the primary mode to commute to work for residents of Chinatown and this number has continued to increase, which is interesting to note considering the auto-centric nature of Calgary (the 2016 census reported that 76% of the city as a whole favours personal cars, either as drivers or passengers, as the primary mode to commute to work). Since 2011, the use of both public transportation and the personal automobile has also increased. Chinatown appears to have a lower proportion of residents who drive to work as compared to the adjacent communities. Neighbouring communities who also favour walking as the primary mode of transportation to work are Eau Claire and Beltline.

The data shown represents the unemployment rate of Chinatown and surrounding communities, retrieved from the Canada national census. As of 2011, the unemployment rate of Chinatown is 5.8%, which is nearly on par with the city-wide unemployment rate of 6%. The City of Calgary unemployment rates were retrieved from the Government of Alberta website.

The census data shows that all of the communities analyzed in this study saw a decrease in unemployment rate. As of 2011, the reported unemployment rate in Eau Claire is 0%, but it is not clear as to whether or not this is the actual unemployment rate or if it is due to a lack of available data. Between 2006 and 2011, unemployment rate increased for all communities except Downtown Commercial Core, Downtown East Village, and Eau Claire. The increase in unemployment rate during this time was likely due to the 2008 recession.

DRAFT

2.10. Dwellings

In this section, we present three characteristics pertaining to housing in Chinatown and surrounding communities.

2.10.1. Dwelling Type

For clarity, the dwelling types are defined as follows, as per the City of Calgary civic census dictionary:

- **Single-family home (SF)** : A structure containing one dwelling on one or two levels
- **Duplex (Dup)**: A structure containing one dwelling on one or two levels
- **Apartment (Apt)**: A structure containing three or more dwellings on three or more levels
- **Townhome (Row)**: A structure designed to contain three or more attached or semi-detached dwelling units
- **Mobile home (M)**: A structure built to be movable, whether it is still movable or attached to a permanent foundation. Also referred to as a manufactured home
- **Converted structure (Con)**: The additional dwelling unit in a structure that contained more units than the building was originally built to contain

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Brigeland-Riverside; BLN=Beltline

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Heights; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

National census data (i.e. data from 1981, 1986, 1991, 1996, 2001, etc.) was not available for all census years up to 2016, so the preceding year (1980, 1985, 1990, 1995, 2000, etc.) was shown in the table instead. The census data shows that apartments comprise the majority of dwelling types found in Chinatown and has historically been this way since 1978. This is a similar outcome in many of the communities in this study except for Bridgeland-Riverside, Crescent Heights, and Sunnyside, who have a considerable proportion of single-family houses and are located further away from the downtown core. The data also shows that there has been an increase in the total number of occupied dwellings in Chinatown, which suggests that there has been an increase in residential development. A similar trend can also be seen in many of the adjacent communities (Beltline, Bridgeland-Riverside, Downtown East Village, Downtown West End, and Eau Claire).

2.10.2. Monthly Rent

COMM	1996	2001	2006	2011	2016	Change (1996-2016)
CHN	423	479	554	1,020	1,161	174.47%
DNC	494	637	731	1,300	1,124	127.53%
DNE	324	474	551	1,366	1,041	221.30%
EAU	604	804	938	1,580	1,645	172.35%
CRE	533	684	771	1,370	1,192	123.64%
SSD	560	722	820	1,413	1,272	127.14%
DNW	573	771	1,042	1,510	1,383	141.36%
BRD	471	615	707	1,332	1,102	133.97%
BLN	1,023	1,322	781	1,477	1,325	29.52%

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

The data shown represents the average monthly cost of all rental units for Chinatown and the surrounding communities. The average cost of rent has increased since 1996 for all of the communities analyzed in this study, with the average monthly rent cost in Chinatown increasing by 174.47% since 1996. As previously mentioned, the average monthly rent in Chinatown as of 2016 is like that of the surrounding communities, even though the average and median incomes reported in Chinatown are relatively low compared to the adjacent communities.

2.10.3. Dwelling Value

COMM	1996	2001	2006	2011	2016	Change (1996-2016)
CHN	90,312	102,890	214,668	277,233	373,394	313.45%
DNC	87,863	112,182	309,889	445,375	428,168	387.31%
DNE	N/A	152,234	194,288	284,326	416,989	173.91%
EAU	279,478	307,722	568,945	692,874	881,941	215.57%
CRE	153,728	203,872	388,992	537,906	557,898	262.91%
SSD	164,950	207,715	394,851	485,125	562,079	240.76%
DNW	154,756	210,743	350,528	437,376	490,999	217.27%
BRD	122,264	187,728	364,813	420,733	555,034	353.96%
BLN	238,179	289,091	274,639	347,406	387,688	62.77%

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

The data shown represents the average dwelling value for all private dwellings in Chinatown and surrounding communities, including the value of the land that the dwelling is on and any other structure on the property (such as a garage). The average dwelling value in Chinatown has increased by over 300% since 1996, which is the third-highest reported increase in average dwelling value after the Downtown Commercial Core and Bridgeland-Riverside. A similar trend can be observed in the adjacent neighbourhoods as well. However, the average dwelling value as of 2016 is still slightly lower in Chinatown than the surrounding neighbourhoods. It could be interesting to see how the introduction of the Green Line LRT network will influence the average dwelling value in Chinatown.

3. Businesses in Chinatown

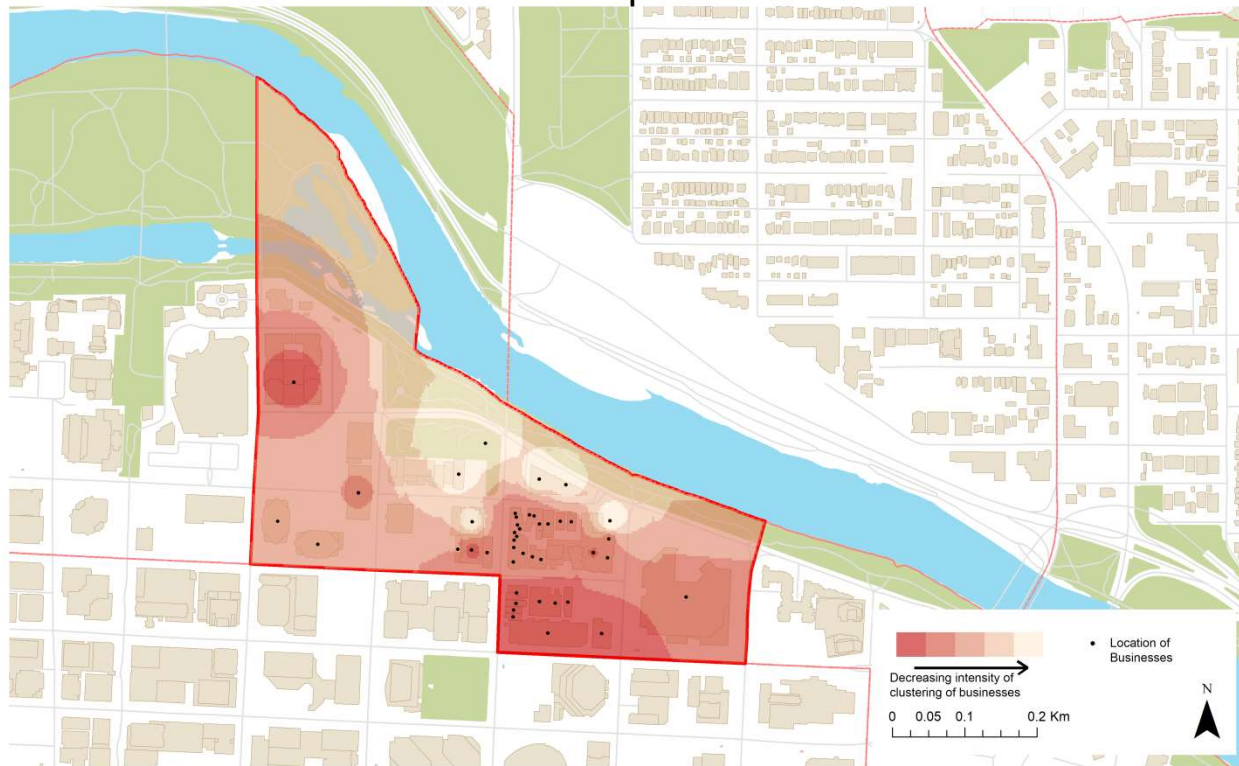

In this section, we mapped the businesses in Chinatown using the latest Business License data from the City of Calgary (June 2020). We present the business hotspots, status of business licenses, as well as the type of businesses present in Chinatown.

3.1. Policy Recommendations

- Prior to any new development in the community, a series of traffic impact assessments need to be completed. The possible impacts on business activities also need to be studied.
- Policy should support pedestrian/cyclist activities for the following areas that have been identified as hotspots for commercial activity and great assets for Chinatown's businesses commercial viability. **(section 3.2)**
 - 2 St SW & Riverfront Ave SW (hotspot)
 - Centre St S & 4 Ave SE (hotspot)
 - Centre St S & 3 Ave SW (hotspot)
 - 2 Ave SE (between Centre St. S & Riverfront Ave SE) (currently not a hotspot but with great potential)
 - Possible measures are, but not limited to, as follows:
 - Temporarily restricting vehicular movement on certain roads (e.g. at certain times during the day or on weekends) – one block on 2nd & 3rd Ave east of Centre Street S – to allow for outdoor seating (patios), biking/ pedestrian mall environment, etc.
 - Dedicated bike lanes on Centre Street and 4th Ave SE,
 - Additional bike parking outside businesses on Centre Street, 2nd Ave, 3rd Ave and 4th Ave.
 - Exploring design/management options to support year-round biking, e-scooter/ e-bike usage within Chinatown.
- Policy should support diversification of businesses that can take advantage of the existing businesses and the locational potential (i.e., its central location and proximity to the bow river and the pathway system) of the community. **(section 3.3)**
- Policy should provide some flexibility in business license applications, particularly under the pandemic situation. **(section 3.4)**
- Policy should consider extending the benefits of the Centre City Enterprise Area (CCEA) initiative to Chinatown.

3.2. Business Hotspots

Chinatown Business Licenses - Hot Spots

We mapped the hot spots of business licenses in Chinatown, i.e. a rudimentary idea of density and clustering of businesses within the community. Most of businesses are clustered in the south and east of Chinatown along Centre Street and 4th Ave, with decreasing intensity of clustering as we move towards the river. The area close to 2 St SW and Riverfront Ave SW seems to be another spot with the relatively intense business activities. This may indicate a higher intensity of traffic movement in these areas.

3.3. Types of Businesses

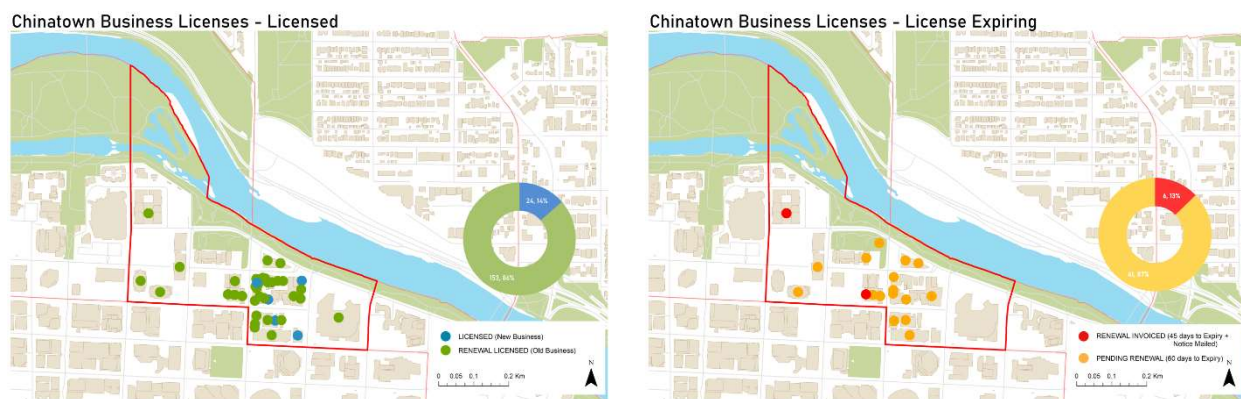

License Type	Number of License	Percentage
Alcohol Beverage Sales (Drinking Est/Restaurant)	1	0.4%
Alcohol Beverage Sales (Drinking Establishment)	1	0.4%
Alcohol Beverage Sales (Restaurant)	22	9.8%
Apartment Building Operator (4 Or More Storeys)	2	0.9%
Body Rub Centre (Grandfathered Massage Centre Commercial)	4	1.8%
Charitable Organization	6	2.7%
Contractor (No Provincial Licence Required)	2	0.9%
Entertainment Establishment	4	1.8%
Food Service - Premises	17	7.6%
Food Service - Premises (No Seating)	12	5.4%
Food Service - Premises (Seating)	43	19.2%
Liquor Store	1	0.4%
Manufacturer	6	2.7%
Massage Centre (Commercial)	5	2.2%
Motor Vehicle Repair And Service (2-Prov N/R)	1	0.4%
Outdoor Patio	2	0.9%
Personal Service	17	7.6%
Personal Service (Independent Chair Operator)	2	0.9%
Personal Service (Tattoo)	2	0.9%
Photographer	3	1.3%
Retail Dealer - Premises	56	25.0%
School (Driver Education)	2	0.9%
School (Prov. Not Required)	1	0.4%
Second-hand Dealer	3	1.3%
Tobacco Retailer	6	2.7%
Wholesaler	3	1.3%
Total	224	100.0%

Most of businesses in Chinatown are Food Services (~32%), followed by Retail Dealers (25%) and Drinking establishment (~11%). There are other businesses that are similar in nature to the ones mentioned before but classified differently as per the City of Calgary. This indicates a high number of business establishments dependent on direct customer service, i.e. customers visit these establishments in person.

3.4. Status of Business Licenses

Status of License	Number of Businesses	Percentage	Percentage (Study Area)	Percentage (Calgary)
Licensed	24	11%	9%	9%
Renewal Licensed	153	68%	69%	71%
Renewal Invoiced	6	3%	5%	5%
Pending Renewal	41	18%	17%	15%
Total	224	100%	100%	100%

There are a total of 224 licensed businesses in Chinatown. Around 21% of the businesses in Chinatown have their licenses pending for renewal, while the others were about to expire within 60 days (June 2020). Of the pending licenses, 87% (41) were about to expire within 60 days, and 13% (7) were about to expire in 45 days with the invoice mailed to the business. While compared to the study area and the city (9% each), Chinatown has a slightly higher percentage of new businesses (11%), indicating a slight influx of business activity within the community while having a fairly similar rate of businesses requiring renewal (21% for Chinatown, 22% for study area and 20% for Calgary).

Most of the licensed businesses in Chinatown are old businesses (153), i.e. they have had their licenses renewed. On the other hand, there are around 24 new businesses (new license).

4. Transportation

In this section, we have spatially analysed the transportation infrastructure within Chinatown and other communities of interest. For this analysis, we have used spatial datasets available from the city of Calgary open data platform, as well as data requested from the City of Calgary via Spatial and Numeric Data Services at the University of Calgary. Data used is primarily from August to October 2019.

We have attempted a comparative analysis of transportation infrastructure (pedestrian, bike, private vehicles, transit & parking) for each community as well as a broader comparison in the overall context of Calgary. We idea is to briefly state the current status, relative strengths/weaknesses as well as some policy implications of the same.

4.1. Policy Recommendations

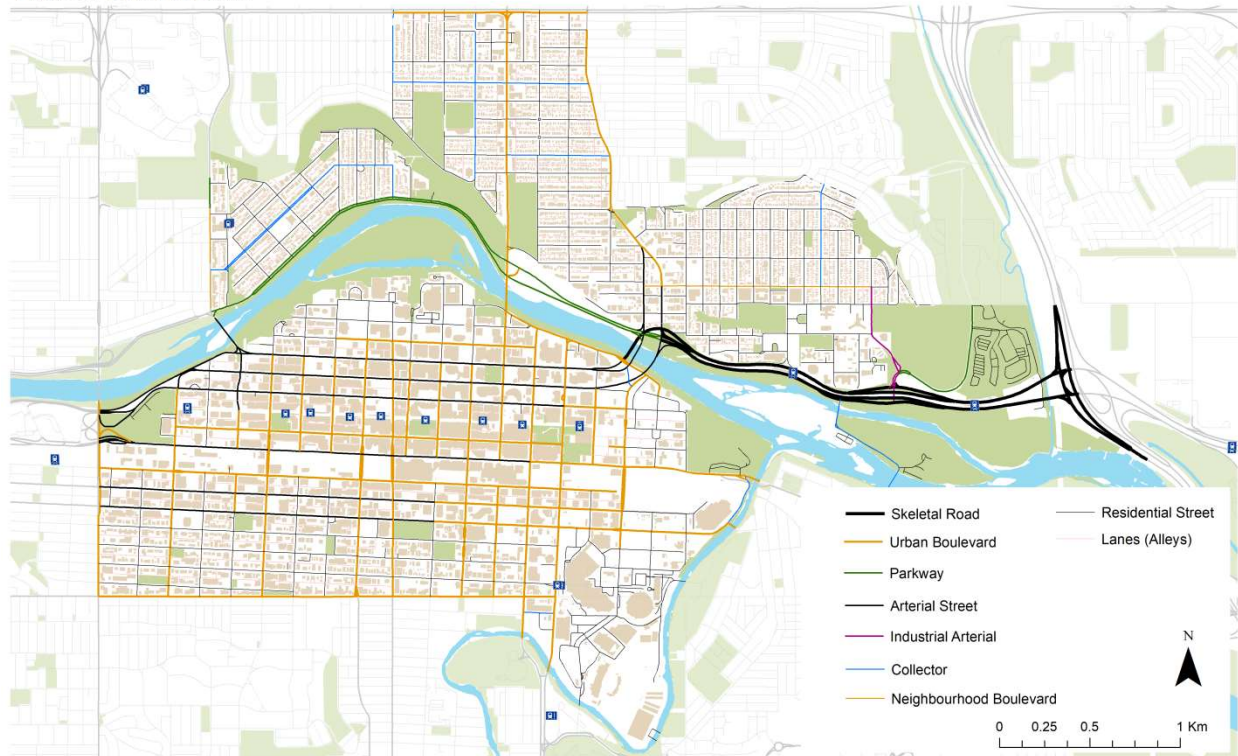

- Prior to any new implementations in the community, a series of traffic impact assessments need to be completed, and the possible impact on business activities needs to be studied.
- Overall, policy should support improvement of the quality of pedestrian/cyclist facilities.
 - 2 Ave and 3 Ave have potential for being converted into pedestrian-oriented street closed for motorized traffic, or into shared streets. **(section 4.2.1)**
 - Temporary restriction of vehicular movement on certain roads (e.g., one block on 2 Ave SE & 3 Ave SE), which may allow for outdoor seating (patios), etc., can attract more visits by non-motorized travellers.
 - Improving access for pedestrians from the river pathways into Chinatown on Centre Street through Riverfront Ave **(section 4.2.2)**
 - Performing a pedestrian and road safety audit, looking at potential areas of pedestrian-vehicular conflicts and areas of improvement **(section 4.2.2)**
 - Identifying dark spots and improving lighting on sidewalks and parking lots for greater sense of safety and activating the streets during evenings/night **(section 4.2.2)**
- Policy should support provision of dedicated bikeways and bike facilities. **(section 4.2.3 & section 4.4.2)**
 - Dedicated bike lanes on Centre Street and 4 Ave SE
 - More bike parking outside businesses on Centre Street, 2 Ave, 3 Ave and 4 Ave.
 - Exploring design/management options to support year-round biking, e-scooter/ e-bike usage within Chinatown.
- Policy should explore possibility of direct bus routes to/from Chinatown (besides Centre Street), including multi-modal connectivity to the new Green Line LRT station after carefully studying future traffic impact within the community. **(section 4.2.4)**
- Policy should enhance last-mile connectivity from the proposed LRT station on 2nd Ave. **(section 4.2.4)**

- Policy should ensure safety of visitors, workers and residents using non-motorized modes on high volume streets such as Centre Street and 4th Ave **(section 4.3.1)**
- Urban design elements along the river pathways while approaching and within Chinatown to make bikers aware of it as a potential destination. These can include signage (informational/ directional), unique street furnishings (light posts, paving, rails, benches, etc.), advertisements, street paintings, etc. **(section 4.3.2)**
- Policy should support implementation of urban design elements (e.g., road signs, etc.) in the catchment area (by non-motorized modes of transportation) of the community or along the river pathway and bike lanes to nudge people to Chinatown. **(section 4.4.1 & section 4.4.2)**
- Policy should support the increase in transit connectivity towards Southeast Calgary in the short-/medium-term (until the Green Line is operational) through more BRT and bus routes, especially on weekends. **(section 4.4.3)**
- Policy should support improvement of last-mile connectivity from bus stops and LRT stations through investments in pedestrian and bike infrastructure, as well as promoting e-bikes/e-scooters as an option **(section 4.4.3)**
- A more detailed parking study (for both short- and long-term) is recommended to assess demand/supply gaps and factors dictating parking prices in Chinatown in Calgary as compared with other prominent Chinatowns/downtown business districts in Canada and North America. **(section 4.6 & section 4.7)**

4.2. Transportation Network

4.2.1. Road Network

Road Network

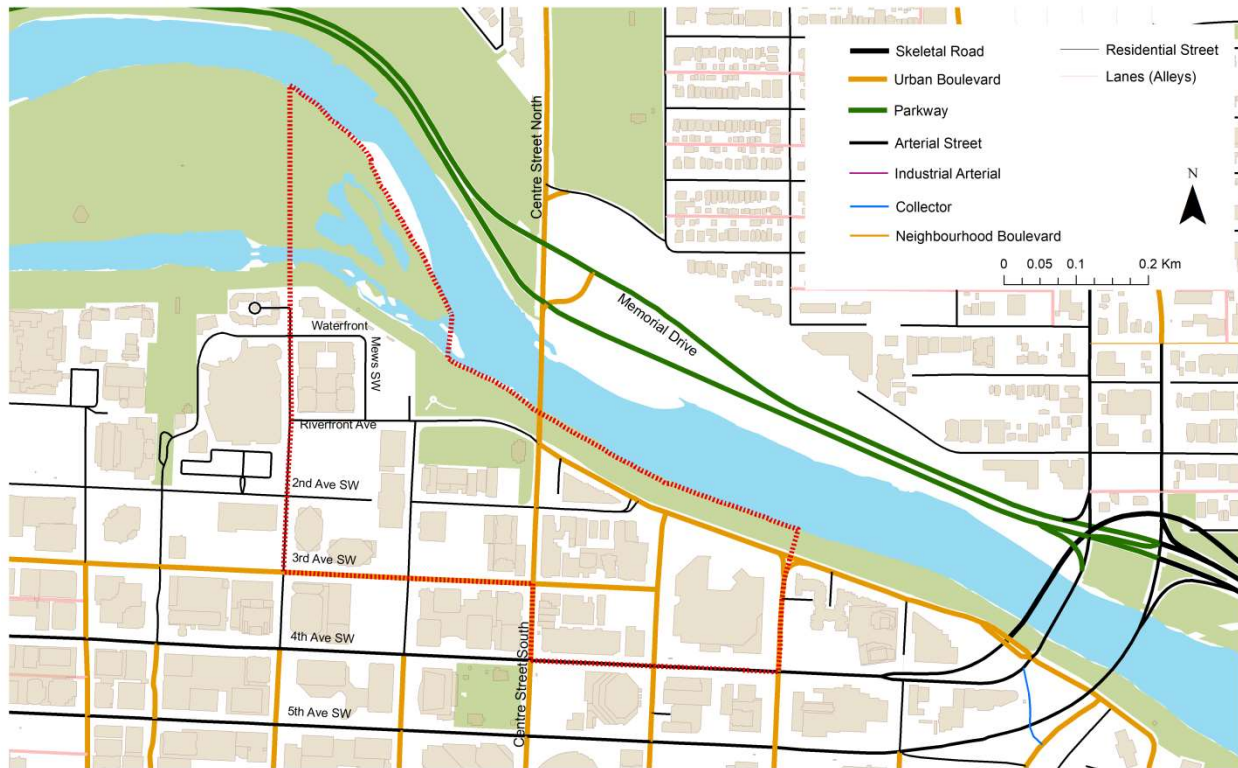

Most of downtown comprises of Urban Boulevards (i.e. High Traffic roads along high density corridors) going north-south, with Arterials (i.e. High Traffic roads for direct traffic connections) going east-west. Urban Boulevards provide greater priority to active modes while still carrying high traffic volumes while arterials give greater priority to vehicular traffic. This indicates that east-west corridors are city-level connectors through vehicular traffic moving through Downtown, while north-south corridors are important local connectors for traffic and pedestrians moving within downtown.

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

Road Network - Chinatown

The area north of 4th Avenue is primarily Residential Streets, indicating lower traffic and more residential character. Chinatown is well connected with major roads such as Centre Street in the middle and McLeod Trail on the east. It is primarily bounded by Urban Boulevards, with Residential Streets in the middle indicating high traffic movement at the edges and lower volumes in the core, creating a contained unit. The southern boundary is demarcated by an Urban Boulevard (3rd Ave) and Arterial Street (4th Ave), western boundary by a Residential Street (2nd Street SW), eastern boundary by a major Urban Boulevard (Macleod Trail), and the Northern Boundary by another Urban Boulevard (Riverfront Ave SE). The eastern half of Chinatown (east of Centre Street) witnesses more traffic, and would traditionally indicate more intensity in activity. Chinatown, due to its smaller size has a much smaller road length and moderate road density.

4.2.2. Pedestrian Network

Pedestrian Pathways - Chinatown

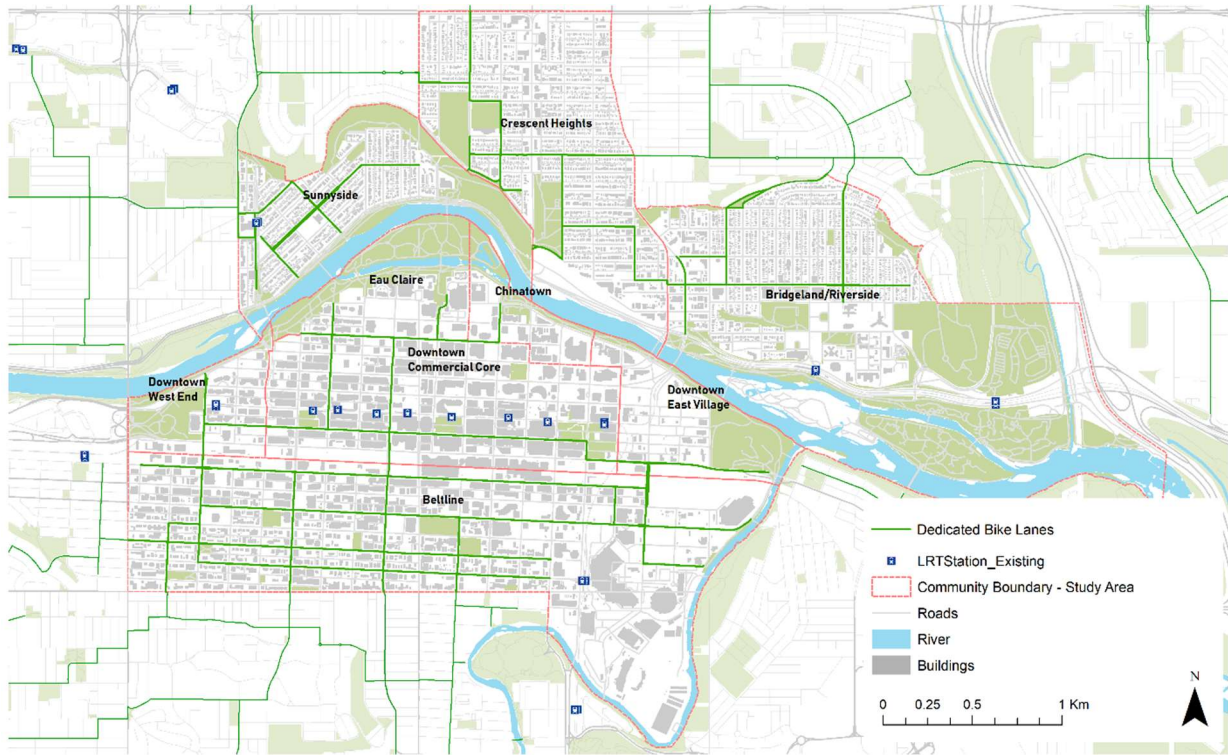

COMM	Pathway Length (km)	Pathway Density (km/sq.km)
CHN	7.7	31.1
DNC	29.6	22.3
DNE	14.1	27.1
EAU	14.5	28.2
CRE	45.7	28.1
SSD	28.2	27.6
DNW	12.3	33.8
BRD	74.7	24.5
BLN	57.5	19.5
YYC	11274.1	13.3

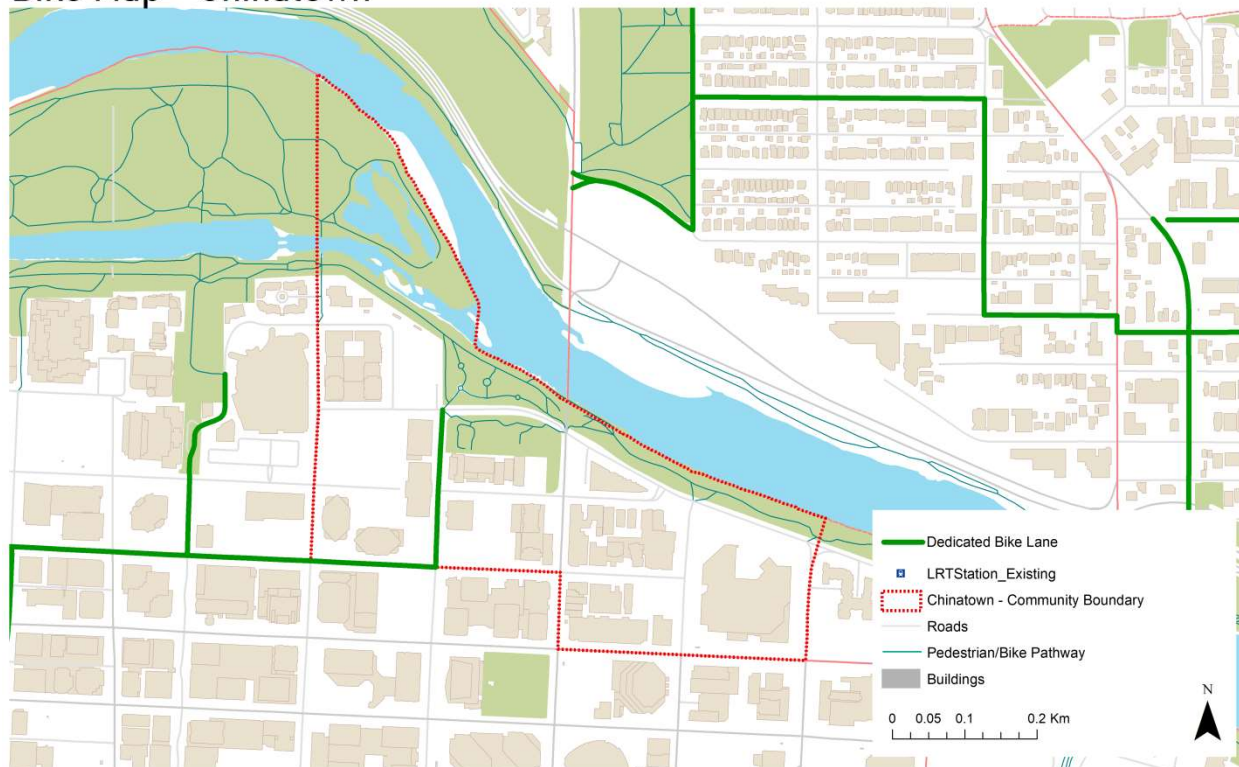

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

Chinatown has a high density of pathways among the abutting communities, indicating smaller block sizes, finer built fabric and good potential for walkability in the community (pending further investigation into quality of sidewalks).

4.2.3. Bike Network

Bike Map - Chinatown

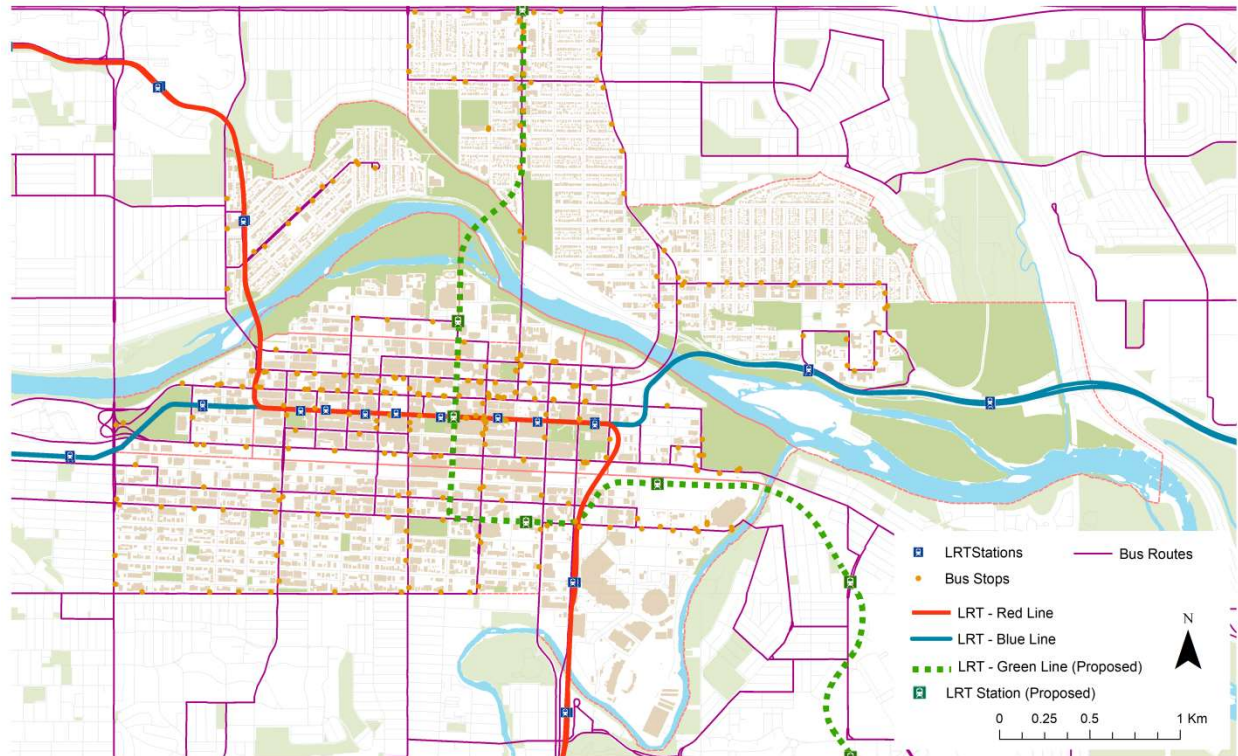

COMM	Length of Dedicated Bikeways (m)	Bikeway Density (m/sq.km)
CHN	562	2,270
DNC	4,705	3,541
DNE	1,640	3,149
EAU	1,662	3,221
CRE	8,268	5,087
SSD	4,920	4,813
DNW	1,310	3,594
BRD	5,403	1,772
BLN	18,557	6,302
YYC	487,716	575

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Height; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

The bike network in the study area is more extensive and concentrated, mostly due to its central location and presence of attractions (businesses, river, etc.). Beltline has the most extensive network and highest density of bike paths among all communities in the study area. Chinatown has the lowest length of dedicated bikeways among the communities, along with one of the lowest densities of bikeways. This can be attributed to its relatively small size, and mostly residential character.

4.2.4. Transit Network

Public Transit Network

COMM	Bus Stops	Bus Stop Density (stops/km ²)	Bus Routes	LRT Stations (Existing)	LRT Routes (Existing)	Distance to nearest LRT Station
CHN	4	16	14	-	0	450m
DNC	134	101	38	8	2	-
DNE	12	23	18	-	2	400m
EAU	3	6	1	-	0	650m
CRE	33	20	16	-	0	1800m
SSD	15	15	4	1	1	-
DNW	19	52	19	1	1	-
BRD	24	8	4	2	1	-
BLN	63	21	13	-	1	950m

Note: CHN=Chinatown; DNC=Downtown Commercial Core; DNE=Downtown East Village; EAU=Eau Claire; CRE=Crescent Heights; SSD=Sunnyside; DNW=Downtown West End; BRD=Bridgeland-Riverside; BLN=Beltline

The study area is one of the most well-connected areas in Calgary through transit, with presence of two LRT lines (the only place in Calgary to have both LRT lines), 12 LRT Stations, 43 bus routes and almost 300 bus stops.

Chinatown has one of the lowest number of bus stops (4) and bus stop densities among the communities being studied, but is accessible by one route on the west (Route 449 – Eau Claire/Parkhill) and 12 bus routes along centre street station alone (2, 3, 17, 62, 64, 109, 16, 142, 300 and 301), though many of the bus stops for these routes are just outside the

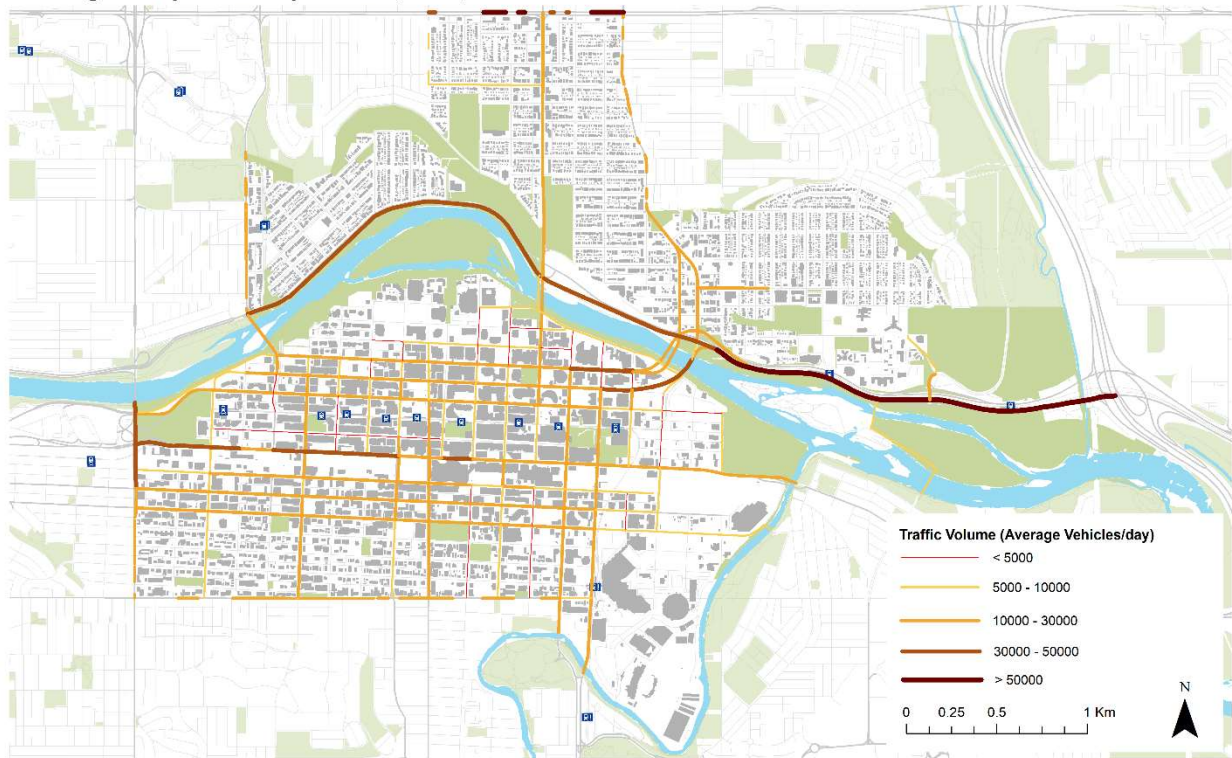

community boundary. The nearest LRT station (1st Street Station) is around 500m (around 5 – 8 minutes walk) from the centre of the community. This makes Chinatown one of the most well-connected communities in Calgary through transit. But since most of the transit connectivity is just outside the actual community boundary, it is important to maintain and enhance last-mile connectivity features such as walking, e-scooters, wayfinding, etc.

The proposed LRT Green Line also passes through the western edge of Chinatown, with the 2nd Street Station being proposed at 2nd Ave and 2nd Street. The new LRT line should enhance Chinatown's connectivity to the south-east quadrant of Calgary, with the first phase going from 16 Ave N to Shepherd in the SE.

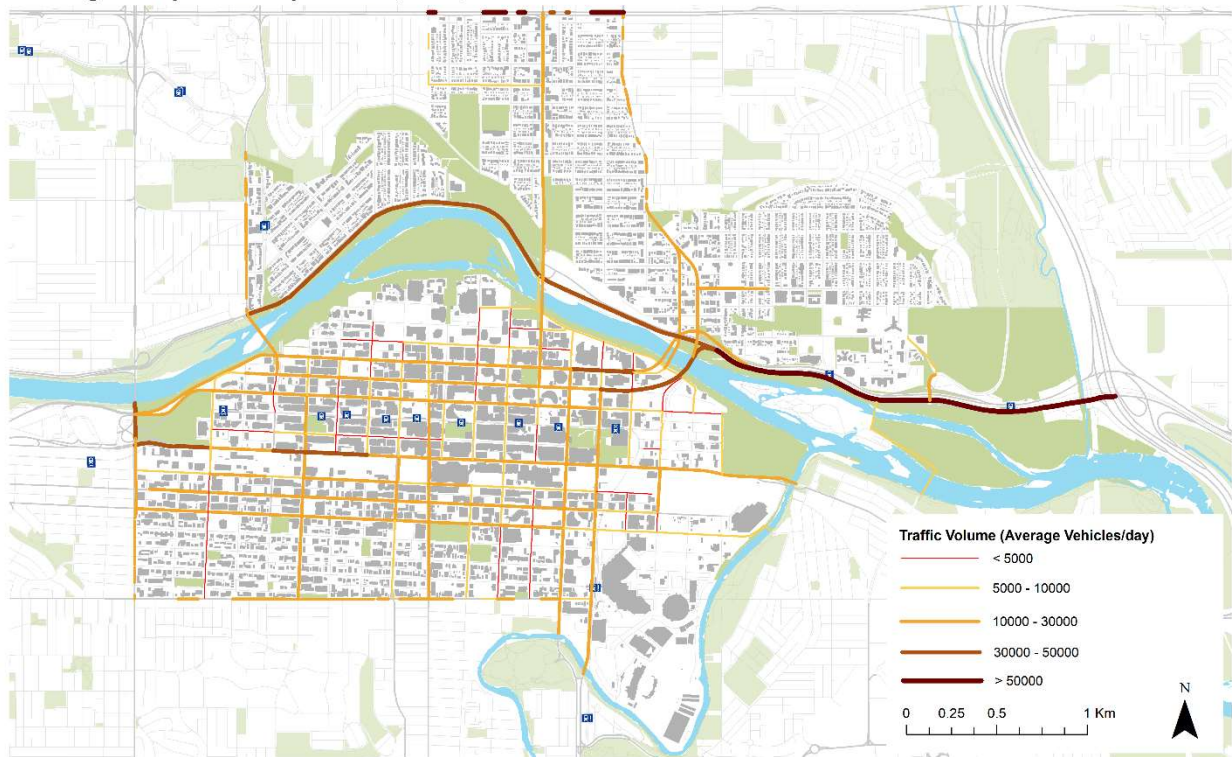

4.3. Transportation Volumes

4.3.1. Road Traffic

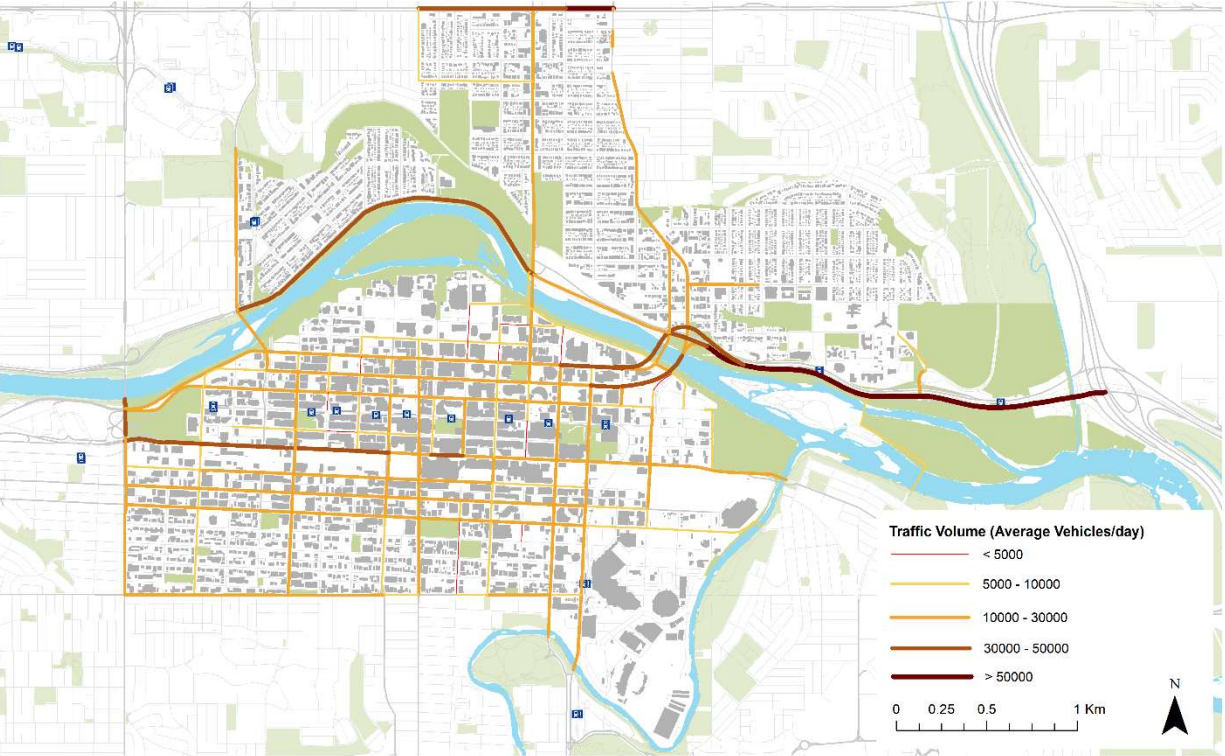

Average Daily Weekday Traffic (2015)

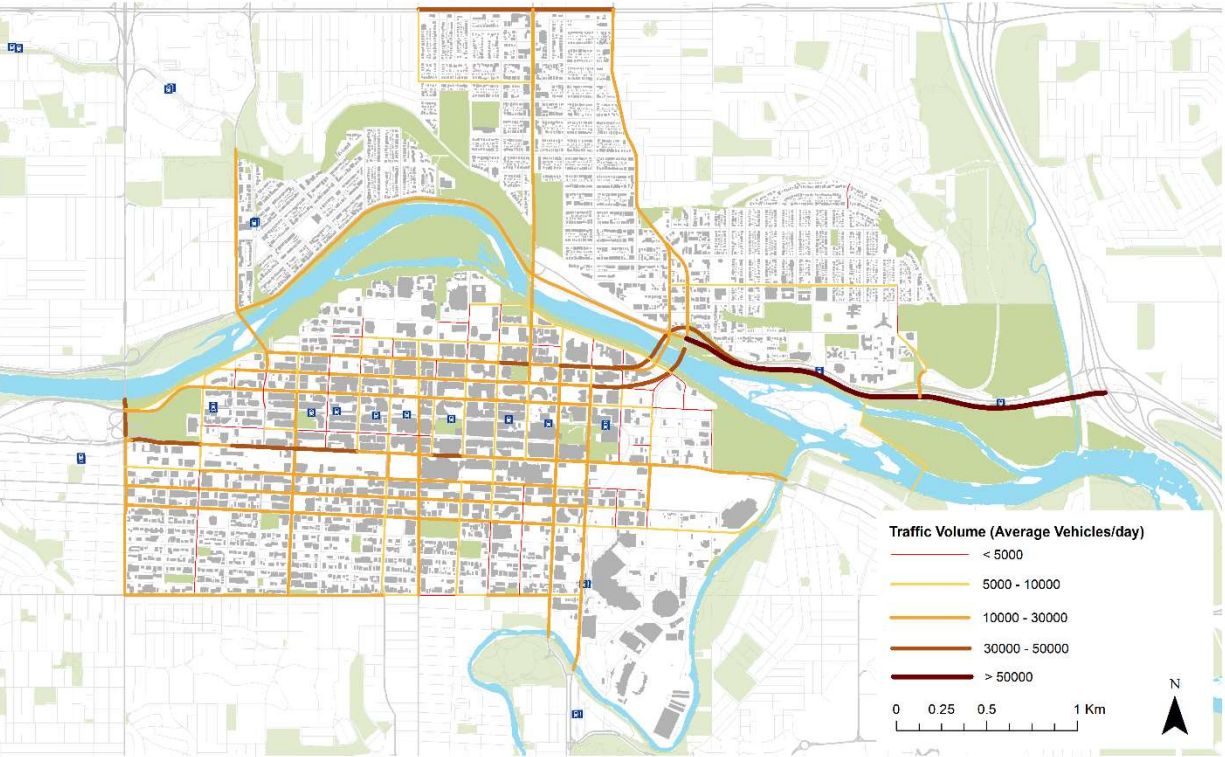

Average Daily Weekday Traffic (2016)

Average Daily Weekday Traffic (2017)

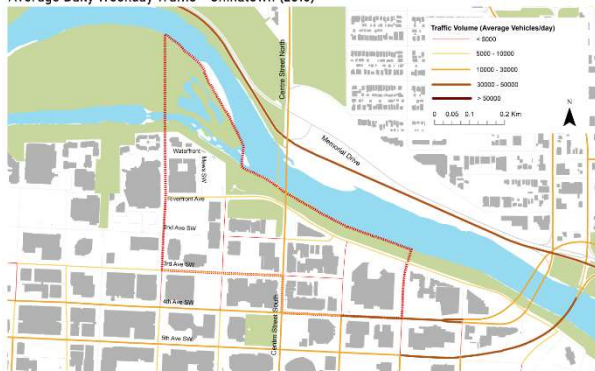

Average Daily Weekday Traffic (2018)

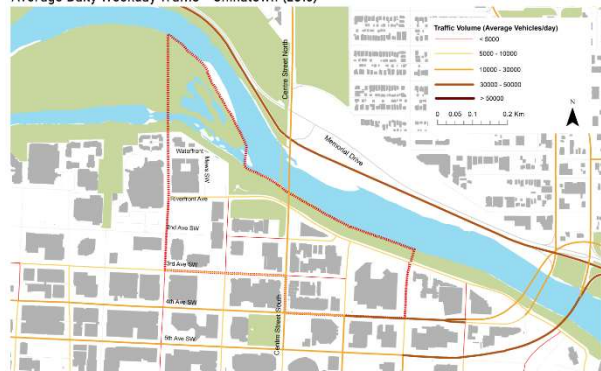

The daily average weekday traffic volumes reveal high traffic volumes on 4th Ave (~30,000 vehicles per day), and Centre Street (~22,000 vehicles per day), followed by Riverfront Ave (~10,000 vehicles per day) and 3rd Ave (~7000 vehicles per day). This indicates the most of the high traffic roads are on the boundaries going east-west (except Centre Street which is in the middle and goes north-south). These roads create the primary axes for our site on which activities are likely to be concentrated, and require special attention with respect to pedestrian and bike safety.

In terms of the overall study area, the most drastic shift in traffic can be seen on Memorial Drive, which has actually seen a decrease in average daily traffic (decrease from 30,000 – 50,000 range to 10,000 – 30,000 range).

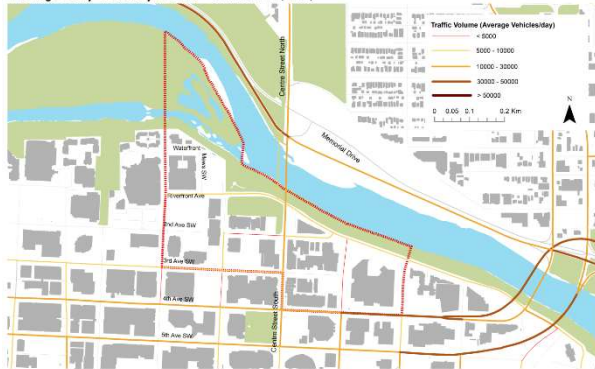

Average Daily Weekday Traffic - Chinatown (2015)

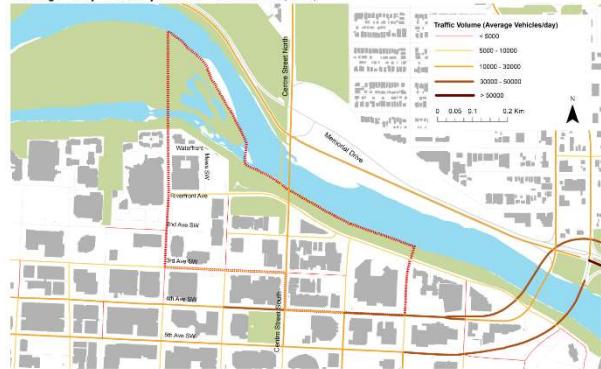

Average Daily Weekday Traffic - Chinatown (2016)

Average Daily Weekday Traffic - Chinatown (2017)

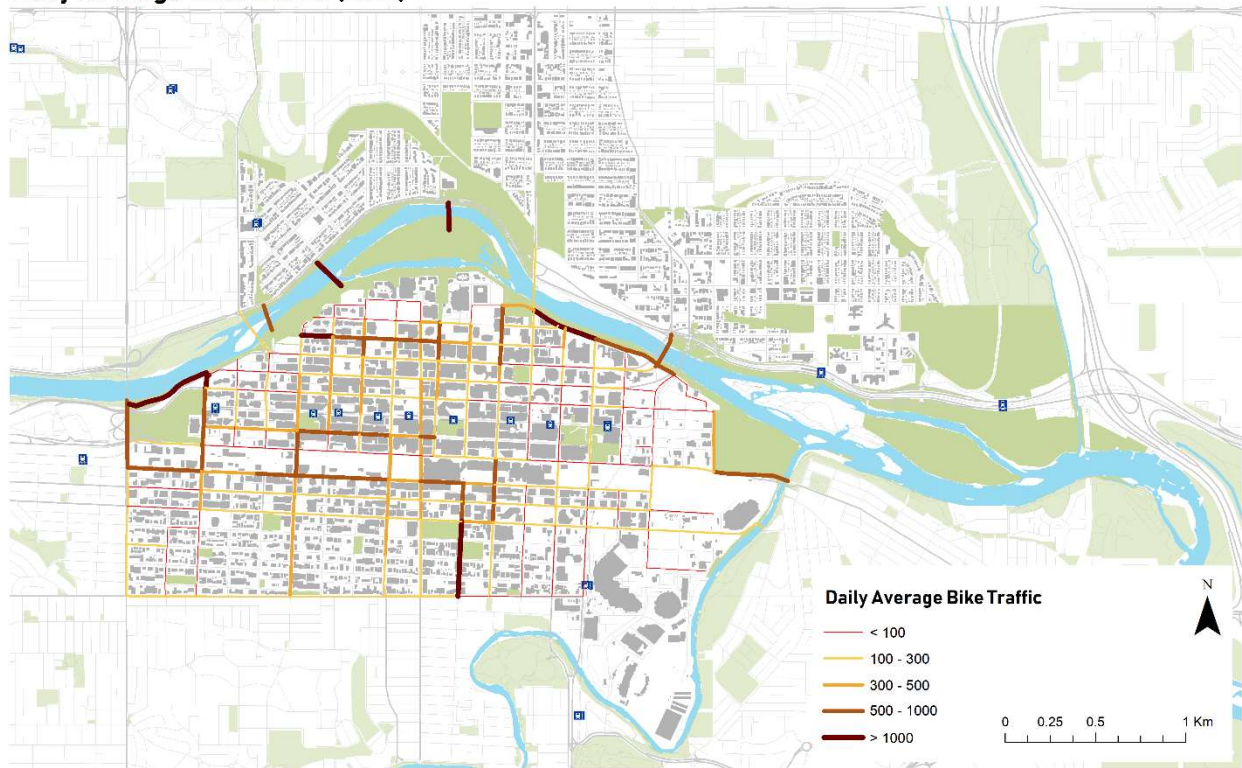

Average Daily Weekday Traffic - Chinatown (2018)

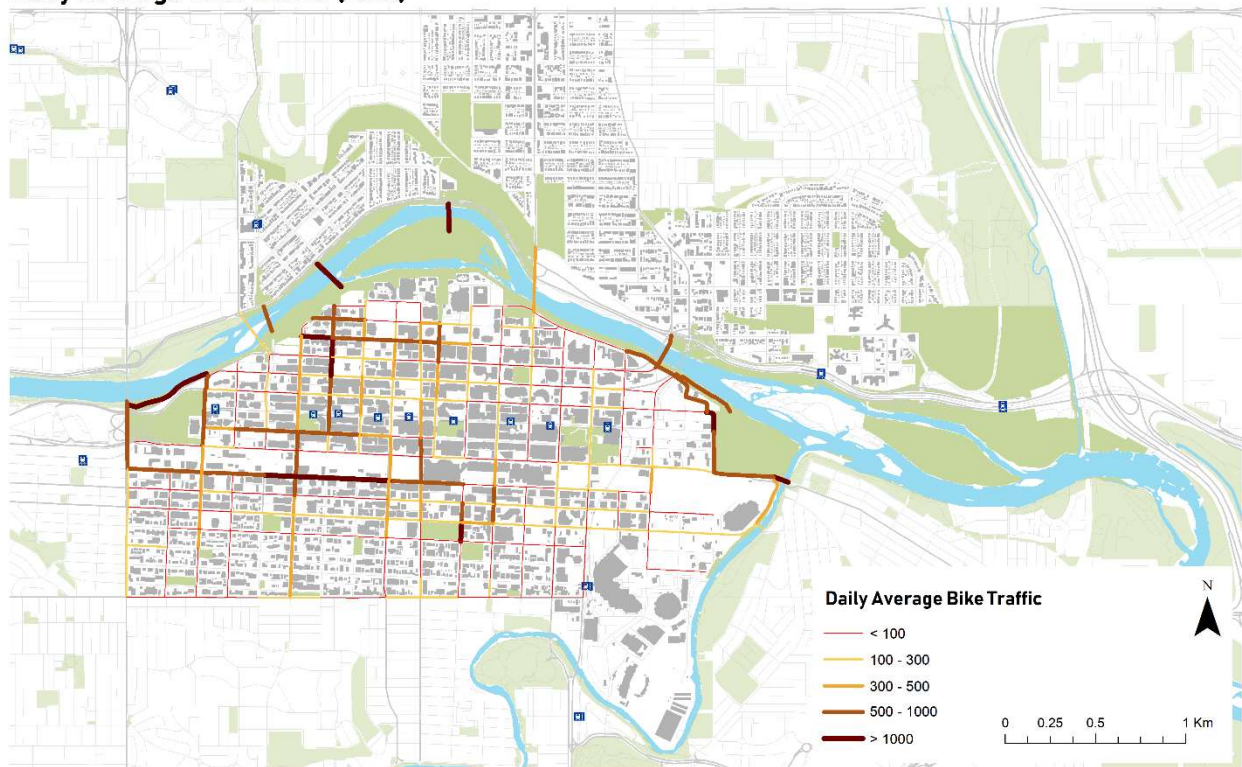

The evolving traffic volume study reveals an overall trend of stable average daily weekday traffic within Chinatown. Major increases in traffic between 2015 and 2018 have occurred on 4th Ave (traffic above 30000 vehicles per day, almost exceeding the intended capacity), 2nd Ave (traffic above 5000 vehicles per day), as well as 1st Street East and 1st Street West (traffic above 5000 vehicles per day).

4.3.2. Bike Traffic

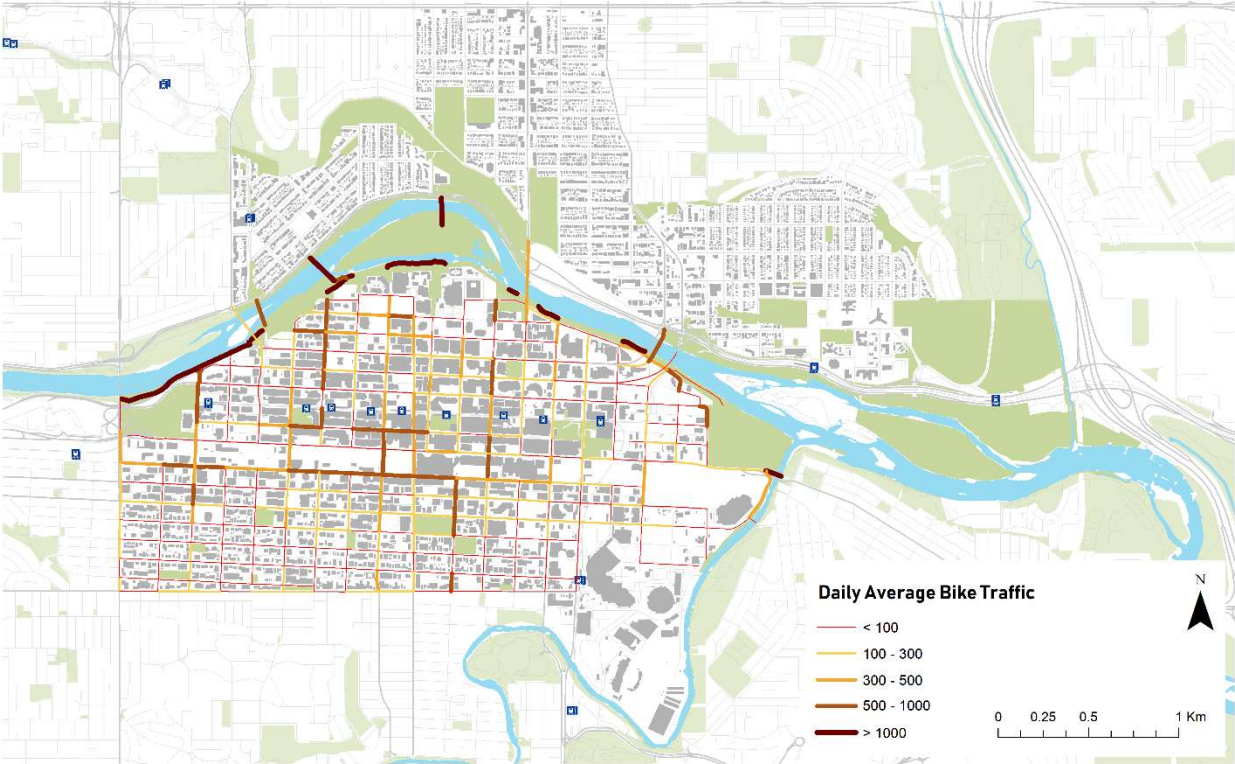

Daily Average Bike Traffic (2012)

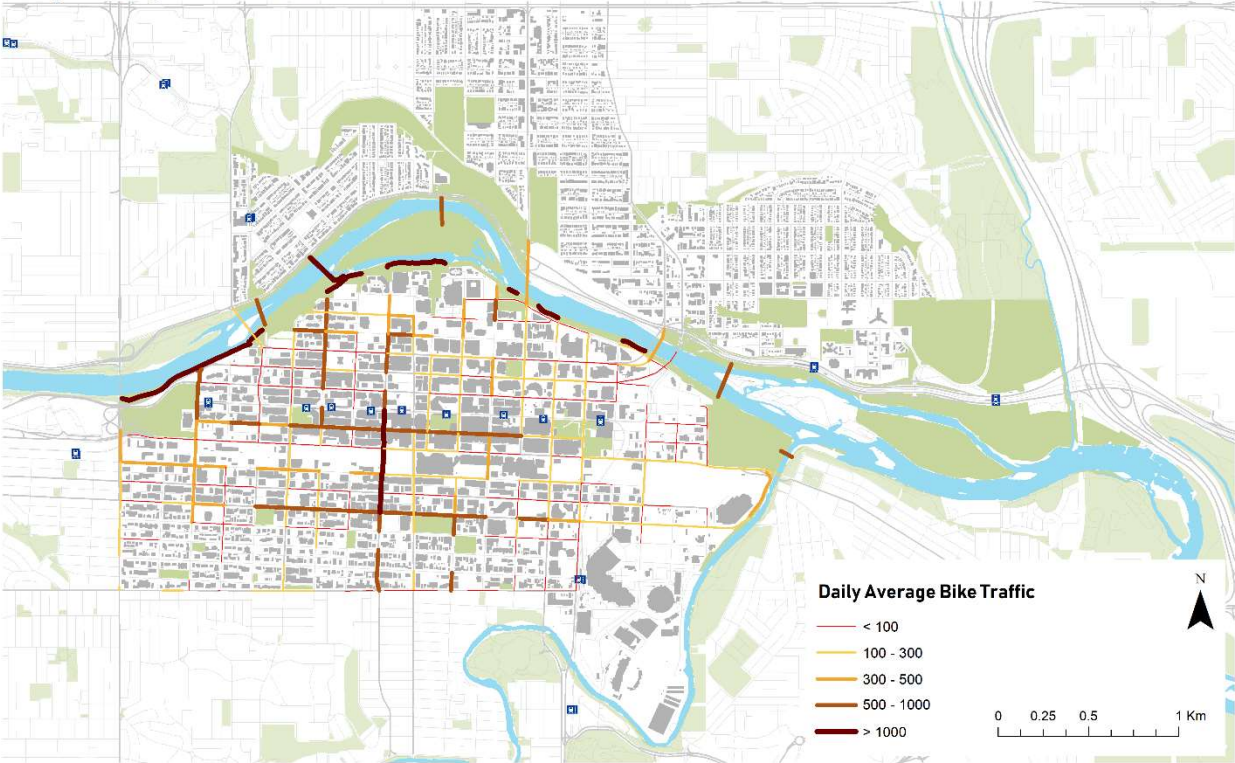

Daily Average Bike Traffic (2013)

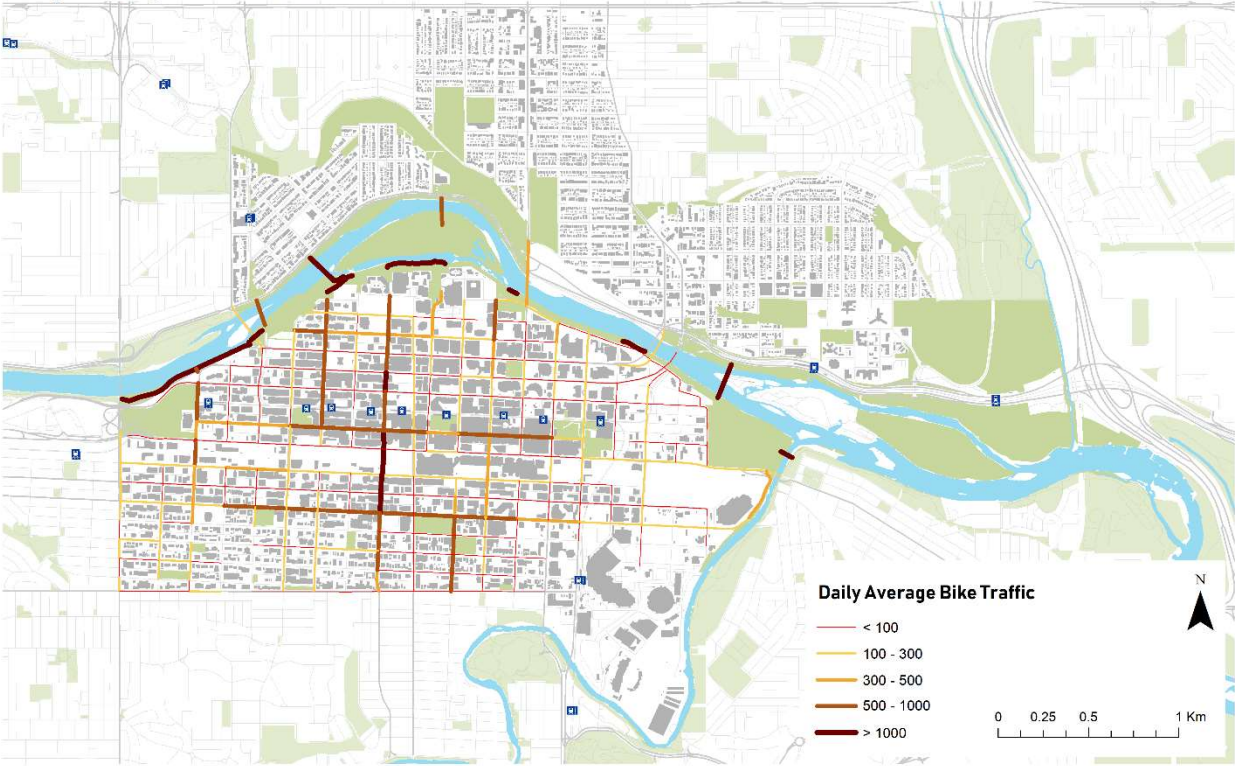

Daily Average Bike Traffic (2014)

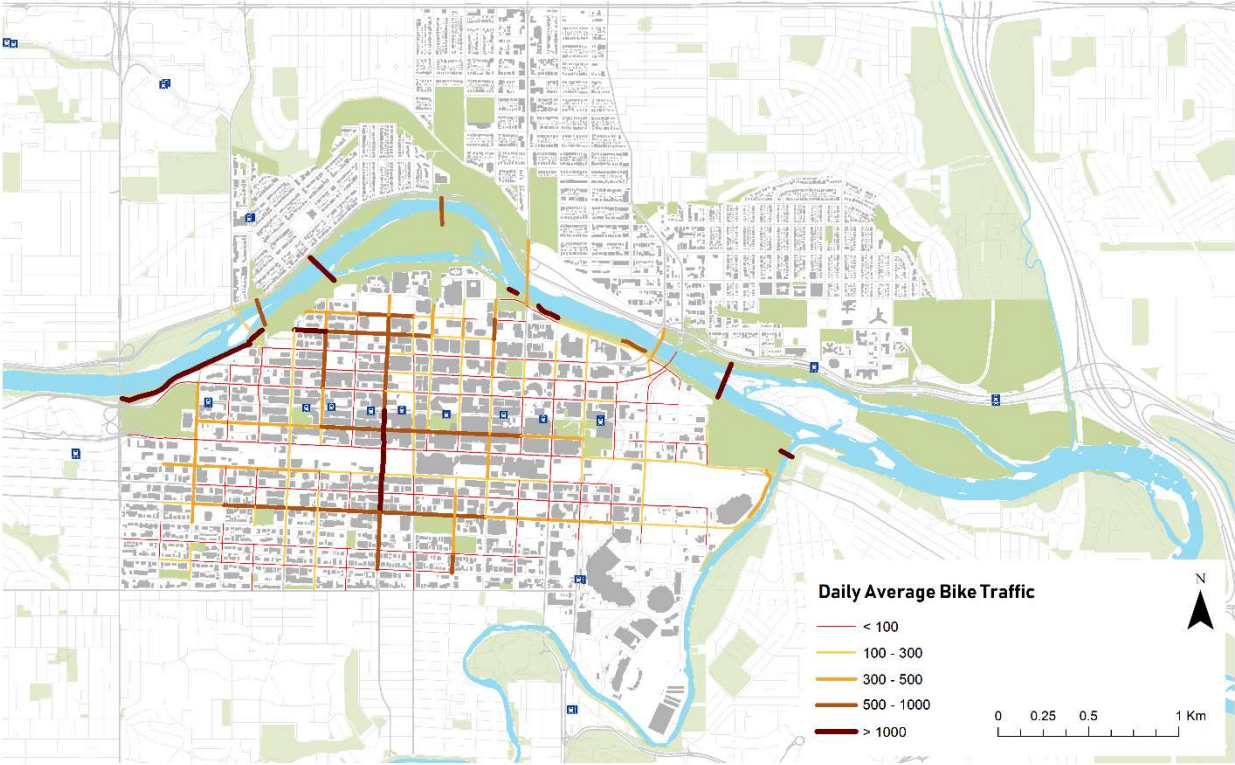

Daily Average Bike Traffic (2015)

Daily Average Bike Traffic (2016)

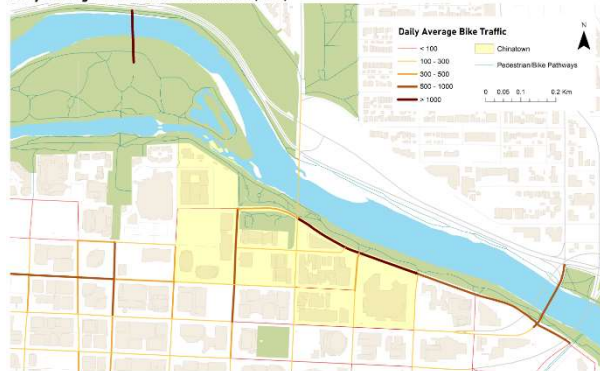

Daily Average Bike Traffic (2017)

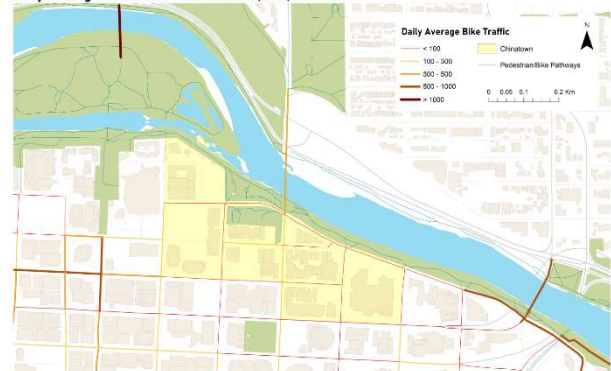

High bike volumes are observed along the river pathways, western end of 3rd Ave (In Eau Claire and Downtown West End), as well as consistently high bike volume along 5th Street, 8th Ave and 12th Ave. These high volumes can be attributed to presence of dedicated bikeways on these streets.

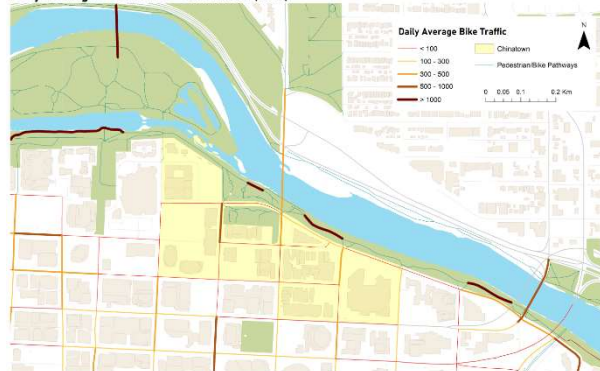

Daily Average Bike Traffic - Chinatown (2012)

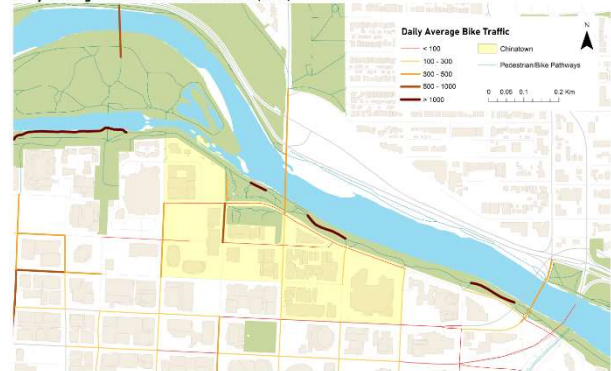

Daily Average Bike Traffic - Chinatown (2013)

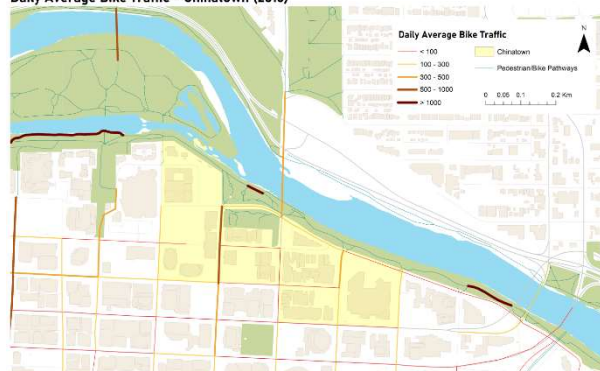

Daily Average Bike Traffic - Chinatown (2014)

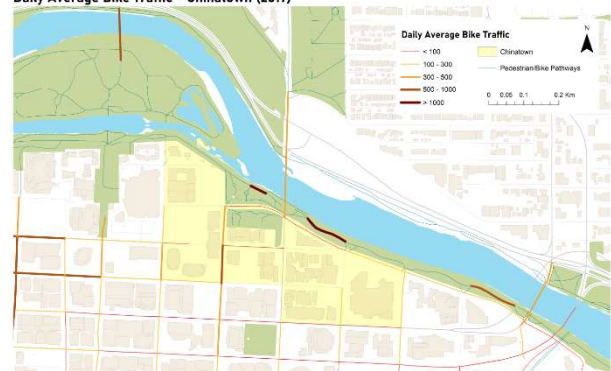

Daily Average Bike Traffic - Chinatown (2015)

Daily Average Bike Traffic - Chinatown (2016)

Daily Average Bike Traffic - Chinatown (2017)

Overall, much of Chinatown's bike traffic has remained stagnant between 2012 and 2017, though it has seen a noticeable decrease in volume of bike traffic on 1st Street West and Riverfront Ave, as well as along river pathway. A more detailed assessment of bikeway projects in downtown will reveal the reason(s) for the same.

4.4. Service Coverage by different Modes

In this section, the service coverage for different modes of transportation (i.e. the area within which a person can travel using a particular mode of transportation from a point within a certain time) has been calculated using GIS. The point of origin is constant for all modes of transportation, i.e. intersection of 2 Ave SW and Centre Street South. For each mode of transportation, a different data-set has been used to calculate the service coverage and methodology for the same has been described for each in the respective sections. The service coverage has been calculated for five different time durations – 10, 20, 30, 45 and 60 minutes.

This has been further supplemented by calculating the warp ratio for different transportation modes (except public transit), i.e. the ratio of the actual area one can cover in different directions (as per the pathways available for that particular mode) in a certain time duration compared to the area one can cover if a person travels linearly (or ‘as the crow flies’) in any direction from the same point. A higher ratio would indicate better accessibility from that mode of transportation.

The main objective for this analysis is to understand ease of accessibility using available modes of transportation from Chinatown to different services, landmarks and residential communities of the city, as well as providing a comparative assessment of the different modes.

4.4.1. Walksheds

Walkshed is the area within reach of a person by walking in a fixed time duration in any direction from a point. For calculating walkshed, we assumed an average walking speed of 80 m/minute (4.8 km/h or 3 miles/hr), the person walking does not take a break while walking, does not have to wait for a significant amount of time at intersections. Based on these assumptions, a person can walk 800m in 10 minutes, 1600m in 20 minutes and so on. On ArcGIS platform, we used the network analyst tool to calculate the walking service coverage along roads (except major arterials) and pathways. We calculated the service coverage, the warp ratio as well as communities that are accessible from the selected point in Chinatown (2 Ave and Centre Street). Moreover, we have also identified major services and attractions within a 10 minute walking distance. The findings have been presented below.

Pedestrian Access - Walkshed

Access	Within 10 min	Within 20 min	Within 30 min	Within 45 min	Within 60 min
Area (sq.km)	1.38	5.62	12.68	27.86	48.05
% of Calgary Accessible	0.16%	0.66%	1.50%	3.28%	5.67%
Warp Ratio ¹	0.69	0.70	0.70	0.68	0.66
Communities Accessible (Intersect)	8	13	21	37	57
Communities Accessible (Major portion ²)	2	7	11	23	38
Area of Calgary – 848 sq.km					
Total Communities in Calgary - 306					

Unsurprisingly, the spatial area covered by walking from Chinatown is not significant at the city level, though within a walk of 30 minutes one can access 21 communities (significant portion of 11 communities), and by walking for 60 minutes (though unlikely), one can access 57 communities (significant portions of 38 communities) which is quite significant. The walk warp measure is quite high within the first 30 minutes, and starts to reduce as one walks further out, indicating superior walkability within close proximity to Chinatown. Much of it can be attributed to grid pattern of streets within Chinatown and inner-city communities, which typically has a superior walkability as compared to other street topologies.

Facilities accessible within a 10-minute walk

Services/Facilities	Number	Name
Recreational	14; 11 Major Parks ³	Olympic Plaza, Eau Claire Plaza, Sien Lok Park, James Short Park, Rotary Park, Eau Claire YMCA, Prince's Island Park, Fort Calgary, McHugh Bluff, Riverfront Promenade, Poppy Park
Health	-	
Education	4	Alberta Chung Wah School, Calgary Chinese Private Schoool, Bow Valley College, W.H. Cushing Workplace School
Emergency Services	2	EMS Station and Fire Station
Major Shopping Centres		Eau Claire Market
Attraction	8	Glenbow Alberta Museum, Trans Canada Trail Pavillion, Calgary Chinese Cultural Centre, Arts Commons, Telus Convention Centre, Calgary Tower, Rocky Mountaineer Rail Tours, Contemporary Calgary Art Gallery
Transit Stops	Bus Stops - 67 LRT Stations – 2	-
Others	1	Alberta Court of Appeal

¹ Warp is the ratio of Actual Area to the Radial Area (i.e. area of the circle whose radius is equal to the linear distance travelled within that time by walking). The value obtained would be in a range of 0 to 1, with values closer to 1 indicating a street/road pattern that provides excellent mobility and values closer to 0 indicating a street/road pattern providing poorer mobility.

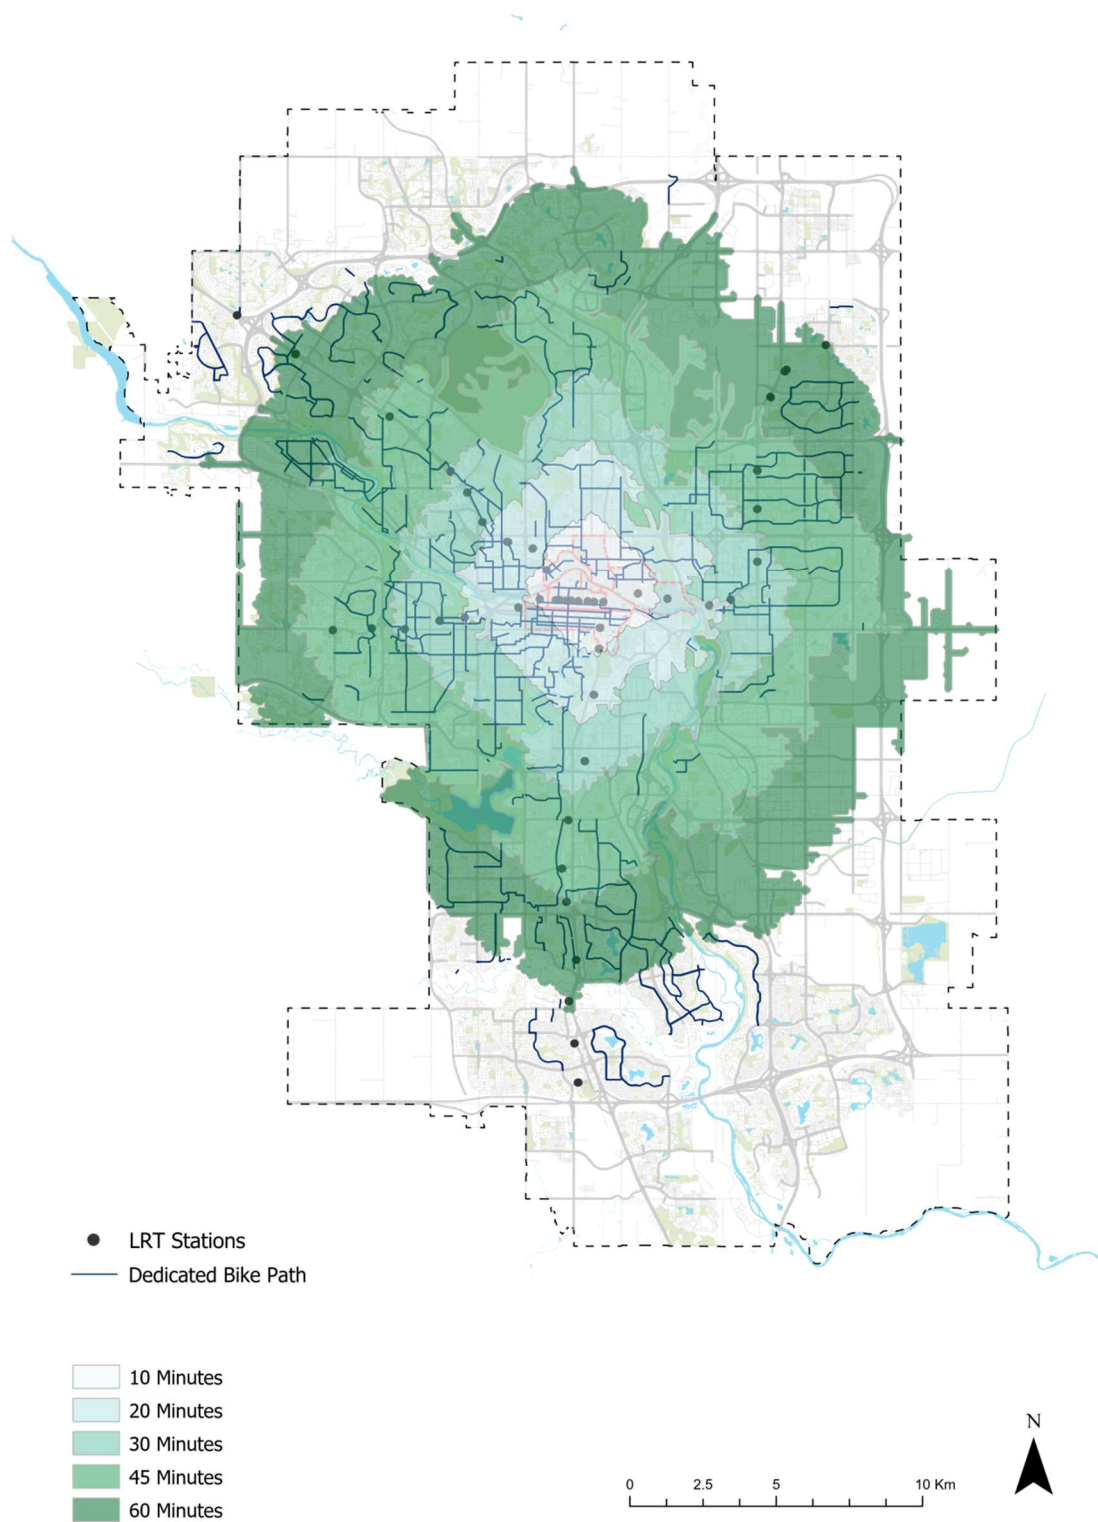

² Walkshed is within 100m of the community centroid

³ Classified as Regional Parks as per City of Calgary

4.4.2. Bikesheds

Bikeshed is the area within reach of a person by biking in a fixed time duration in any direction from a point. For calculating Bikeshed, we assumed an average biking speed of 250 m/minute (15 km/h), the person biking does not take a break while biking and does not have to wait for a significant amount of time at intersections. Based on these assumptions, a person can bike 2500m in 10 minutes, 5000m in 20 minutes and so on. On ArcGIS platform, we used the network analyst tool to calculate the biking service coverage along roads (except major arterials) and pathways. We calculated the service coverage, the warp ratio as well as communities that are accessible from the selected point in Chinatown (2 Ave and Centre Street). Moreover, we have also identified major services and attractions within a 10 minute biking distance. The findings have been presented below.

Bike Access - Bikeshed

Access	Within 10 min	Within 20 min	Within 30 min	Within 45 min	Within 60 min
Area (sq.km)	14	52	119	259	450
% of Calgary Accessible	2%	6%	14%	31%	53%
Warp Ratio ⁴	0.71	0.66	0.67	0.65	0.64
Communities Accessible (Intersect)	23	63	112	176	233
Communities Accessible (Major portion ⁵)	14	42	93	152	203
Area of Calgary – 848 sq.km					
Total Communities in Calgary - 306					

From Chinatown, 53% of Calgary is accessible within a 60-minute bike ride⁶ with almost 233 communities (and a significant portion of 203 communities) accessible, indicating a surprisingly good bike accessibility from Chinatown. The warp measure decreases with increase in time and distance, indicating poorer biking access as we move away from Chinatown.

Facilities accessible within a 10-minute bike ride

Services/Facilities	Number
Recreational	Parks – 88; 19 Major Parks ⁷ , Athletic/ Leisure Centres - 3
Health	PHS Clinic - 1
Educational	University Campuses – 3 College - 1 Schools - 14
Emergency Services	Fire Station – 3 EMS Station – 2 Police Service - 1
Major Shopping Centres	2 - The Core, Eau Claire Market
Attractions	Museums - 2 Convention Centre - 2 Galleries - 3 Historic Sites - 1 Others – 4 Arenas - 2
Transit Stops	Bus Stops - 406 LRT Stations - 19
Others	Courts – 4 Community Centres – 6 Social Dev Centre – 1 Library - 1

⁴ Warp is the ratio of Actual Area to the Radial Area (i.e. area of the circle whose radius is equal to the linear distance travelled within that time by biking). The value obtained would be in a range of 0 to 1, with values closer to 1 indicating a street/road pattern that provides excellent mobility and values closer to 0 indicating a street/road pattern providing poorer mobility.

⁵ Bikeshed is within 100m of the community centre

⁶ Driving at an average speed of 15 kmph

⁷ Classified as Regional Parks as per City of Calgary

4.4.3. Transitsheds

Transitshed is the area within reach of a person using public transit (mix of walking, bus and Light Rail) in a fixed time duration in any direction from a point. For calculating Transitshed, we used the General Transit Feed Specification (GTFS) data from October 2019, made available by Calgary Transit. The GTFS data is published by Transit agencies containing information regarding current transit schedules, fare and the geographic components of the transit system. On ArcGIS platform, we used the network analyst tool to model and calculate the transit service coverage using the GTFS data, combined with roads and pathways. Since we could use actual transit schedules, we mapped the transit service coverage during four distinct times during a typical weekday (Thursday) and a weekend (Saturday), given the difference in schedules on weekdays and weekends. The time slots chosen were 8 AM, 1PM, 5PM and 7PM to reflect peak traffic hours and also match with our first in-person user survey time slots (except 8AM in the morning). We also analysed how many communities are accessible from the selected point in Chinatown (2 Ave and Centre Street). The findings have been presented below.

Transit Access - Weekday (8am)

Transit Access - Weekday (1pm)

Transit Access - Weekday (5pm)

Transit Access - Weekday (7pm)

Transit Access - Weekend (8am)

Transit Access - Weekend (1pm)

Transit Access - Weekend (5pm)

Transit Access - Weekend (7pm)

Communities Accessible

Time	% of Calgary Accessible	Communities Accessible – 10 min	Communities Accessible – 20 min	Communities Accessible – 30 min	Communities Accessible – 45 min	Communities Accessible – 60 min
WD – 8am	49%	8	37	102	202	251
WD – 1pm	45%	8	25	90	185	235
WD – 5pm	49%	8	29	92	196	251
WD – 7pm	47%	8	28	97	188	240
WE – 8am	42%	9	35	95	188	229
WE – 1pm	40%	8	22	75	173	225
WE – 5pm	41%	9	29	80	174	227
WE – 7pm	40%	9	35	87	176	226

Area of Calgary – 848 sq.km

Total Communities in Calgary - 306

Note: WD=weekday; WE=weekend

Significant portion of Community

Time	Communities Accessible – 10 min	Communities Accessible – 20 min	Communities Accessible – 30 min	Communities Accessible – 45 min	Communities Accessible – 60 min
WD – 8am	3	14	46	154	206
WD – 1pm	3	13	44	131	201
WD – 5pm	3	15	40	142	212
WD – 7pm	3	12	40	136	194
WE – 8am	3	15	44	130	191
WE – 1pm	3	12	36	117	184
WE – 5pm	3	16	41	121	184
WE – 7pm	3	17	47	119	184

Area of Calgary – 848 sq.km

Total Communities in Calgary - 306

Note: WD=weekday; WE=weekend

The transit service covers anywhere between 40 – 49% of Calgary within 60 minutes of Chinatown (depending on the day and time), providing access to 225 – 251 communities (to some extent), and a significant portion of 184 – 212 communities within Calgary. This indicates good accessibility through public transit though surprisingly, biking is more accessible and has a higher coverage area than transit from Chinatown. Furthermore, it was seen that transit coverage was significantly better on weekdays (45-49% of the city depending on the time) as compared to weekends (40-42% of the city depending on the time). This indicates poorer service coverage on weekends, which might discourage potential visitors from using transit to visit Chinatown or even forgo visiting Chinatown altogether, especially people who are reliant on public transit.

4.4.4. Drivesheds

Driveshed is the area within reach of a person by driving in a fixed time duration in any direction from a point. For calculating Driveshed, we assumed an average driving speed of 40 km/h and the person driving does not take a break while driving. Based on these assumptions, a person can drive 6.67km in 10 minutes, 13.34km in 20 minutes and so on. On ArcGIS platform, we used the network analyst tool to calculate the driving service coverage along all motorized roads within and outside Calgary (using regional roads data from Alberta Open Data). We calculated the service coverage, the warp ratio as well as communities that are accessible from the selected point in Chinatown (2 Ave and Centre Street). Moreover, we have also identified major services and attractions within a 10 minute driving distance. The findings have been presented below.

Car Access - Driveshed

Access	Within 10 min	Within 20 min	Within 30 min	Within 45 min	Within 60 min
Total Area (sq.km)	88	344	721	1496	2879
Area within Calgary (sq.km)	88	342	623	808	823
Warp Ratio⁸	0.63	0.62	0.57	0.53	0.57
% of Calgary Accessible	10%	40%	73%	95%	97%
Communities Accessible	94	209	282	306	306
Communities Accessible (Major portion⁹)	70	178	259	299	303
Area of Calgary – 848 sq.km					
Total Communities in Calgary - 306					

Driving is the primary transportation choice for Calgarians¹⁰ and a simple driveshed analysis shows that almost 97% of Calgary, as well as 306 communities (and a significant portion¹¹ of 303 communities) is accessible within a 60-minute drive¹² of Chinatown. Even within a 30 min. drive from Chinatown, more area and communities are accessible than a 60 min. journey using Bike or Public Transit. This clearly shows driving is still the most accessible mode of transportation from Chinatown.

Facilities accessible within a 10-minute drive

Services/Facilities	Number
Recreational	Parks – 464; 41 Major Parks ¹³ ; Athletic/ Leisure Centres – 4
Health	PHS Clinic – 3; Hospitals - 1
Educational	University Campuses – 3; College – 1; Schools - 45
Emergency Services	Fire Station – 10; EMS Station – 8; Police Service - 3
Major Shopping Centres	5 -
Attractions	14; Museums – 4; Convention Centre/ Auditorium; Galleries - 3
	Others – 7; Arenas - 8
Transit Stations/ Stops	Bus Stops – 1450
	LRT Stations - 43
Others	Courts – 4; Community Centres – 41; Social Dev Centre – 4; Library - 4

⁸ Warp is the ratio of Actual Area to the Radial Area (i.e. area of the circle whose radius is equal to the linear distance travelled within that time by driving). The value obtained would be in a range of 0 to 1, with values closer to 1 indicating a street/road pattern that provides excellent mobility and values closer to 0 indicating a street/road pattern providing poorer mobility.

⁹ Bikeshed is within 100m of the community centre

¹⁰ Almost 78% of all trips to work in Calgary were made by a car/truck/van in Calgary in 2015, Census 2016, Statistics Canada

¹¹ Driveshed is within 100m of the community centre

¹² Driving at an average speed of 40 kmph

¹³ Classified as Regional Parks as per City of Calgary

4.5. Travel Mode Comparison

Modes	Median Travel Time	Mean Travel Time
<i>Public Transit (LRT/Bus + Walking)</i>	46 minutes	48 minutes
<i>Driving (40 kmph)</i>	18 minutes	18 minutes
<i>Driving (30 kmph)</i>	24 minutes	24 minutes
<i>Driving (20 kmph)</i>	36 minutes	36 minutes
<i>Bike (15 kmph)</i>	48 minutes	48 minutes
<i>Bike (10 kmph)</i>	72 minutes	72 minutes

Comparing the accessibility from Chinatown through different modes of transport, it is clear that driving is the most accessible mode of transport with an average travel time to any part of the city¹⁴ being 18 minutes. Active modes of transportation such as Public Transit and Biking provide almost the same accessibility from Chinatown to different parts of Calgary with the same average travelling time of 48 minutes. Even at really low average driving speeds (20 kmph) driving is still significantly faster than active modes of transportation for reaching different destinations from Chinatown.

4.6. Parking Capacity

Chinatown has a mix of surface and on-street parking within its community boundary. The total surface parking capacity is 736 in six private and one city-owned parking lot. Much of this capacity is within a single parking lot on Riverfront Ave and 2 Street SW (314, or 43% of total). Based on preliminary research, there may be an additional 611 lots within 100 m of the boundary of Chinatown¹⁵.

Sno.	Ownership	Capacity (1) ¹⁶	Capacity (2) ¹⁷	Lot Area (Sq.m)
1	Private	314	321	10,018
2	Private	48	49	1,802
3	Private	211	181	6,499
4	Private	40	40	1,299
5	Private	19	19	646
6	City of Calgary	38	50	1,349
7	Private	66	66	2,259
Total		736	726	23,873

¹⁴ Mean distance/travel time based on origin-destination performed from the intersection of Centre Street and 3rd Ave to every intersection in the city using Network Analyst tool on GIS

¹⁵ Source - <https://en.parkopedia.ca/>

¹⁶ Source – City of Calgary

¹⁷ Source - <https://en.parkopedia.ca/>

Chinatown has 1,980 metres of on-street parking, with an approximate capacity for 328 stalls¹⁸ within its boundary and an additional 1,300m (approx. 228 stalls) within 100m of the boundary. Moreover, there are several other underground parking lots in and around Chinatown, and preliminary research reveals a capacity of around 893 underground lots within Chinatown and an additional 2,392 underground lots within 100m of the boundary¹⁹, although these figures are tentative and could vary.

CHINATOWN PARKING MAP

The parking capacity in and around Chinatown is summarized below.

¹⁸ Assuming one stall as 6m in length

¹⁹ Source - <https://en.parkopedia.ca/>

Type of Parking	In Chinatown	Within 100m of Chinatown
Surface Parking	726-736	611 (Tentative)
Underground (Tentative ²⁰)	893	2,392
On-Street	328	228
Total	1,947-1,957	3,231

4.7. Parking Prices

Parking prices vary widely within Chinatown depending on type and time of parking.

4.7.1. On-Street Parking

On-street parking in Chinatown (and in downtown) is managed by the Calgary Parking Authority. Parking between 6pm and 9am is free to use, while between 9am and 6pm, it is paid hourly. The prices vary depending on the time and day of the week. During weekdays (Mon to Fri), the paid parking is divided into 4 different time slots with different hourly rates, while for weekends the parking is paid only between 9am – 6pm on Saturdays and free on Sundays. Hourly rates vary by location, and the City of Calgary employs a demand-based variable pricing where hourly parking rates for a location are adjusted by \$0.25 annually depending on the parking demand for that location^{21,22}.

Time Slot	Hourly rates (\$/hr)
Mon - Fri (9am – 11am)	\$4.50 - \$4.75
Mon - Fri (11am – 1:30pm)	\$4.75 - \$5.00
Mon - Fri (1:30pm – 3:30pm)	\$4.50
Mon - Fri (3:30pm – 6pm)	\$3.50 - \$4.25
Mon – Fri (6pm – 9am)	Free (with restrictions as per signage)
Sat (9am – 6pm)	\$1.00 - \$1.75
Sundays + Holidays	Free

4.7.2. Surface Parking Lots

Pricing of surface parking lots is more variable and complex than with on-street parking, as it is owned and managed by different entities. A person can be expected to spend as much as \$40.00 per day on parking alone at one of these lots, with monthly rentals going as high as \$625.00 per month. As with on-street parking, prices vary between day-time (usually 6am to 6pm) and night-time (usually 6pm to 6am), as well as with weekdays and weekends, to respond

²⁰ Tentative figures mean the data is not conclusive, as it may be based on third-party sources (parking management websites, etc.)

²¹ Calgary Parking Authority; <https://www.calgaryparking.com/findparking/onstreetrates>. In areas where occupancy is below 50%, prices will decrease by \$0.25; In areas where occupancy is above 80%, prices will increase by \$0.25; And in areas where occupancy is between 50-80%, prices will stay the same.

²² Calgary Parking Authority; <https://www.calgaryparking.com/findparking/onstreet>

to the difference in demand. Weekdays are usually busier as they typically are workdays. Also timing of the day affects parking as mornings usually mean people rushing into downtown to park their cars and evenings mean people leaving the parking lots to commute to their homes. Hourly rates vary from \$6.00 an hour to \$12.00 an hour during day and \$1.00 to \$3.00 per night, with maximum whole day pricing between \$22.00 - \$40.00 and maximum whole night pricing between \$3.00 to \$5.00. Surface parking lots also offer monthly rentals for parking spaces between \$280.00 - \$625.00 per month, depending on location and if the parking is reserved or unreserved. Also, almost all parking lots offer early bird discounts for day time parking that is conditioned on a car entering the lot before a certain time in the morning (usually before 9am)²³²⁴. The parking rates, when compared to other Chinatowns in Canada (Vancouver and Toronto), seem quite high with hourly/daily rates in Calgary 2-3 times higher²⁵.

No.	Rates
1	<p>Mon – Fri (6am – 6pm) - \$8.00 per hr or \$30.00 flat rate for daytime (enter after 9am and leave before 6pm); \$23.00 for early bird (enter before 8am and leave before 6pm); \$27.00 for early bird (enter between 8am & 10am and leave before 6pm)</p> <p>Mon – Fri (6pm – 6am) - \$3.00 flat rate (leave before 6am)</p> <p>Sat – Sun (All day) - \$5.00 flat rate</p> <p>Monthly rate - \$395.00 - \$450.00</p>
2	<p>Mon – Fri (6am – 6pm) - \$5.00 for ½ hr, \$10.00 per hr afterwards up to \$40.00 for daytime (leave before 6pm); \$24.00 for early bird (enter before 9am and leave before 6pm);</p> <p>Mon – Fri (6pm – 6am) - \$5.00 flat rate (leave before 6am)</p> <p>Sat – Sun (All day) - \$5.00 flat rate</p> <p>Monthly rate - \$425.00</p>
3.1	<p>Mon – Fri (6am – 6pm) - \$12.00 per hr; \$35.00 for daytime (leave before 6pm); \$23.00 for early bird (enter before 9am and leave before 6pm)</p> <p>Mon – Fri (6pm – 6am) - \$3.00 per hour and up to \$5.00 (leave before 6am)</p> <p>Sat – Sun (All day) - \$3.00 per hour and up to \$5.00 (leave before 6am)</p> <p>Monthly rate - \$425.00</p>
3.2	<p>Mon – Fri (6am – 6pm) - \$10.00 per hr; Mon – Fri (11:30am – 1:30pm) - \$8.00 flat rate; \$28.00 for daytime (leave before 6pm); \$24.00 for early bird (enter before 9am and leave before 6pm)</p> <p>Mon – Fri (6pm – 6am) - \$3.00 per 3 hours and up to \$5.00 (leave before 6am)</p> <p>Sat – Sun (All day) - \$3.00 per 3 hours and up to \$5.00 (leave before 6am)</p> <p>Monthly rate - \$325.00 – \$625.00</p>
4	<p>Mon – Fri (6am – 6pm) - \$8.00 per hr; \$25.00 for daytime (leave before 6pm); \$19.00 for early bird (enter before 9am and leave before 6pm)</p> <p>Mon – Fri (4pm – 6am) - \$1.00 per hour and up to \$3.00 (leave before 6am)</p> <p>Sat – Sun (All day) - \$1.00 per hour and up to \$3.00 (leave before 6am)</p> <p>Monthly rate - \$280.00</p>

²⁴ <https://en.parkopedia.ca/>

²⁵ <https://en.parkopedia.ca/>

	Sat, Sun, & Holidays (06:00 - 18:00) - \$0.75 per ½ hr, no MAX
	Every day (18:00 - 06:00) - \$0.50 per ½ hr to MAX of \$4.00 (Enter after 16:00 for evening rate)
	Monthly rate – \$325.00
7	Mon – Fri (5am – 11am & 1pm to 6pm) - \$10.00 per hr; Mon – Fri (11am – 1pm) - \$12.00 per hr; \$20.00 for early bird (enter before 8am and leave before 6pm); Max daytime \$26.00 (leave before 6pm); \$23.00 for early bird (enter before 10am and leave before 6pm);
	Mon – Fri (6pm – 5am) - \$5.00 flat rate (leave before 6am)
	Sat – Sun (All day) - \$5.00 flat rate
	Monthly rate - \$400.00

4.7.3. Underground Parking Lots

While the pricing for underground parking lots was not studied in as much detail, the pricing structure and hourly/daily/monthly rates were fairly similar to surface parking lots.

5. Consumer Surveys

As part of the study, three sets of survey was initially planned. However, two sets of survey—in-person and online—were conducted due to the interruption with COVID-19.

5.1. Survey Method and Overview

5.1.1. Survey preparation

Over the summer 2019 the research team worked on the application for the institutional ethics review by the Conjoint Faculties Research Ethics Board (CFREB) at the University of Calgary. In the meantime, the questionnaire for the survey was developed and submitted as part of the application. The CFREB approved the project on September 10, 2019 (Ethics ID: REB19-0956). The questionnaire was initially written in English and consists of four sections and a total of 27 questions. Prior to the in-person survey, the questionnaire was translated to simplified and traditional Chinese to produce a total of three (3) versions of the survey. The English version of the questionnaire is appended to this report.

5.1.2. In-person/on-street survey

The in-person surveys were conducted on the street (Centre St. S & 3 Ave SE) in Chinatown in November 2019. Each version of the survey was then transferred to a tablet through the mobile application, *JotForm* (jotform.com), to collect the data. The survey was administered over two days (Thursday and Saturday) in the same week and collected responses for four (4) hours of each day (10-11AM, 12-1PM, 5-6PM, 7-8PM). On the day of the survey, each researcher had a tablet with the three surveys uploaded to the *JotForm* app for participants to fill out. Hard copies of each of the three surveys were printed and brought to the site on the day that the in-person surveys were conducted in the event that the electronic versions of the survey on the tablets didn't work. Data was collected by approaching people in Chinatown and requesting their participation in the survey.

After the surveys were conducted, the results were collected and analyzed by exporting the responses from the mobile application to Microsoft Excel.

Survey Date	English	Chinese Simplified	Chinese Traditional	Total
Thursday, November 14	52	4	5	61
Saturday, November 16	52	6	10	68
Total	104	10	15	129

5.1.3. Online survey

Because of the physical distancing measures in place due to COVID-19, we were unable to undertake the next sets of in-person survey (slated for winter and summer). Upon discussions with the City of Calgary, it was decided that the second set of survey would be undertaken online.

Prior to the online survey, we made necessary adjustments to the survey questionnaire to accommodate an online format and easier to understand (as a surveyor would not be present to explain the question as is the case with an in-person format). With the same three versions of survey—English, Simplified Chinese, and Traditional Chinese—we used the online survey platform *Qualtrics* to generate a URL for each of the three versions and proceeded to undertake run mock tests to ensure data was being recorded correctly. After running the mock-tests and troubleshooting any potential issues, the surveys were ready to be passed onto potential respondents.

The survey URLs were given to The City of Calgary’s Community Planning team to be disseminated to identified survey respondents. The City of Calgary maintained the list of respondents which included a mix of Chinatown respondents, visitors (regular/casual), workers, etc. The survey began at 11 AM on May 25, 2020 and ended on June 17 2020. We received a total of 90 responses which included 58 complete responses (people who answered all or most of the questions), 28 incomplete responses (people opened the survey link but answered very few or none of the questions) and 4 semi-complete responses (people answered some of the questions). After the closure of the online survey, we exported the responses to Microsoft Excel again. The findings from both surveys are summarized and presented in the subsequent sections.

Survey Date(s)	English (complete)	Chinese Simplified (complete)	Chinese Traditional (complete)	Semi-complete	Incomplete	Total
May 25 – June 17, 2020	52	2	4	4	28	90

5.2. Policy Recommendations

- Conducting a detailed parking study to assess actual parking demand and supply within Chinatown **(section 5.4 & section 5.5)**
- Investing in pedestrian infrastructure within Chinatown, especially improving connectivity to the river pathway system, identifying dark spots to improve street lighting, and safety on crosswalks **(section 5.4)**
- Making active transportation more convenient and time effective – more frequent transit service (bus routes that go through Chinatown beside Centre Street and connectivity with the upcoming LRT station on 2nd Ave), improving walkability to neighbouring communities and improved bike infrastructure (bike parking, dedicated bike lanes/ multi-use lanes, etc.) **(section 5.4 & section 5.5)**
- Increasing the average visitor retention time to more than 2 hours with more diverse offerings, especially with social and ethnic amenities – walking tours (food/heritage tours), dynamic programming in public spaces (streets/ Sien Lok Park/ Dragon City Mall) with pop-up events/ performances, periodic (weekly/monthly) street markets, etc. **(section 5.5)**
- Commercial land uses need to be supported and increased if possible. Any new development should include these kinds of land uses at the ground level. New developments should facilitate the establishment of this land use providing potential patio space for food/drink uses, display space for retail uses, small commercial unit spaces for multiple tenants rather than a large commercial unit with one tenant, flexibility of commercial units so that they could either be retail or food/drink uses, for example provide potential food/drink making infrastructure with gas and water access **(section 5.5)**.
- Potential for more office commercial space (suited to post-COVID work dynamics - flexible co-working spaces, live-work units, short-term office rentals, etc.) to boost business/ work visitations and bring in a more diverse set visitors to the community **(section 5.5)**
- Marketing Chinatown as a potential tourist attraction within Calgary, with a broader identity than as an ethnic enclave **(section 5.5)**
- Addressing concerns of people who may be deterred by safety issues while using the Green Line LRT, with special emphasis on lighting, frequent patrolling, and encouraging active round-the-clock land uses close to LRT stations (eyes on the streets) **(section 5.6)**
- Addressing concerns regarding inconvenience & inefficiency by – improving last-mile connectivity from the 2nd Ave station with possibilities for good multi-modal interchanges (walk, bike, e-scooter, e-bike, bus, cars, etc.), improved pedestrian/bike infrastructure, multi-language signage/ way-finding/ information and universal design (at the station and on major pathways from the station to major destinations within the community) **(section 5.6)**

5.3. Description of Survey Participants

This section presents the profiles of the participants for both surveys. Throughout the surveys, the participants were asked to describe themselves in terms of age, gender, ethnicity, marital status, employment status, residency, and type of association with Chinatown.

Age: We have slightly more people aged between 55 and 64 (21.5%), followed by the group of aged 25 to 34 years old (18.8%) and the group of 18 to 24 years old (14.7%).

Gender: 52.9% were male participants while 45% were females.

Ethnicity: As expected, a significant number of the participants is Asian. Specifically, 42% of the respondents were Chinese and a total of 18% considered themselves Asian. We also have responses from 14% of European.

Marital Status: 45% of participants were married while 40% of them were single. 11% of them lived with a partner.

Employment: 58% of the participants indicated that they were employed as either full-time, part-time or self-employed while 17% of the participants were retired. 16% of the participants were students.

Residency in Calgary: 15% of participants were born in Calgary while 54% have lived in Calgary for more than 5 years. About 9% of the participants had lived in Calgary for less than a year.

Type of Affiliation with Chinatown: In terms of association type with Chinatown, 40% of the total respondents classified them as a casual visitor to Chinatown. About 25% of the respondents were either residents or workers of surrounding communities. We have 14% of Chinatown residents, 4% of Chinatown business owners, and 6% of Chinatown workers.

For the next sets of questions (*sections 6.4 & 6.5*), we categorized our survey participants into two groups (Chinatown Affiliates vs. Chinatown Visitors) based on the response to this question (*how are you associated/connected with Chinatown?*). If a survey participant indicated either 'Chinatown Resident', 'Chinatown Business Owner', or 'Chinatown Worker', we categorized them as **Chinatown Affiliates**, which comprises 24% of the total respondents, and we categorized the rest of respondents (i.e., Downtown Worker, Resident of Community nearby, Casual Visitor, and Tourist) as **Chinatown Visitors**.

Note: Chinatown resident, business owner, and worker are considered **Chinatown Affiliates** while all others are considered **Chinatown Visitors** in the following sections.

5.4. Travel By Chinatown Affiliates

In this section, we summarized the responses from Chinatown Affiliates in terms of their travel behaviour and transportation improvement they wanted to see in their community.

Travel Mode: Unlike the recent Canadian census results for this community, our survey result has more auto commuters (compared to 20.5% in the Canadian census) and fewer commuters using alternative transportation (compared to 72.9% in the Canadian census). 46% of Chinatown Affiliates use a car as the primary mode of transportation (either driver or passenger) for their regular day while 32% use transit and 20% walk to work.

Reasons for Travel Mode: It seems that the respondents who chose convenience and travel time were likely to be the auto commuters while those who chose cost, availability of parking, and cost of parking are likely to be commuters with other means of transport than a car.

Transportation Improvements: Our result indicates that approximately 38% of the respondents wanted to see changes in parking (reduced parking cost and parking capacity increase). 21% of responses were about transit service improvement such as more regular and rapid bus services. 16% of responses were about improvement of pedestrian facilities while 12% of responses were related to bike infrastructure. 9% of responses were road expansion, and 4% of responses were about safety issue.

Other	1	1.9	0	0.0	1	0.9
Total	54	100.0	57	100.0	111	100.0

5.5. Travel by Visitors

This section summarizes the responses from Chinatown Visitors in terms of their visits, travel preference, and transportation improvements for the community from the visitor perspective.

Frequency of Visit: 67% of the visitors in our survey were frequent visitors, meaning they were likely to visit to Chinatown at least twice a month while the weekly visitor is the most dominant group of the visitors.

Hours to Stay: 74% of the visitors tend to stay in Chinatown less than 2 hours while 24% of the visitors were likely to stay more than 3 hours.

Amenities for Visit: The surveyed visitors came to Chinatown mainly for consumer amenities, followed by social amenities and services, and ethnic resources. And 15% of responses say that they came to Chinatown because of its proximity to river, park, and pathways.

Purpose for Visit: The main reason to go to Chinatown is the commercial offerings in place, and commercial land use is really important for Chinatown's vitality. 58.1% of the respondents visiting Chinatown to shop and dine while 19.1% came to the community for socializing.

Travel Mode: 45.1% people access Chinatown by private vehicle (car/motorbike) while 54.9% use pedestrian-based modes (27% use Ctrain, 18% walk, and 7% take bus to come to Chinatown). There was 2% of the participant chose bike as the primary mode of transportation to visit Chinatown. This number is, however, underestimated because of the fact that we didn't get any response from those with bike on the survey days.

Reasons for Travel Mode: The reasons for travel mode are very similar to the responses from the Chinatown Affiliates. The responses of convenience and travel time are likely to come from the car users while cost, cost of parking, and availability of parking are mostly likely to be responses from the others.

Transportation Improvements: The visitors have similar responses with Chinatown Affiliates for Parking and Transit when it comes to transportation improvement wishes. But the visitors want to see slightly more improvement of walkability than the Chinatown Affiliates. About 8% of the responses were about improvement for bike facilities.

5.6. Greenline

During the survey, we asked two questions regarding the future Greenline. The first question is about travel preference by the new Greenline, and the second question is about the reasons for the stated preference.

Travel by Greenline: 66% of the participants show their willingness to take Ctrain while 19% of the participants still want to come to Chinatown by other modes of transportation.

Reasons for using Greenline: Those with willingness to use the new greenline (i.e., absolutely, most likely, and perhaps) chose convenience, availability, affordability, and efficiency as the reasons for using it.

Reasons for not using Greenline: Interestingly, those indicating not using the new greenline chose inconvenience and inefficiency as the reasons for not using it. They also chose safety as an obstacle to use the new greenline.

6. Conclusions

We conclude this report by making six recommendations that are based on idea that promoting active travel, enhancing safety, and revitalizing local businesses. These recommendations also correspond to the sustainability principles and key directions in the recently updated Calgary Transportation Plan (CTP) and Municipal Development Plan (MDP).

Recommendation #1: Supporting Inclusive Policies

Overall, every community in this report has witnessed an increase in population, but its demographic composition varies (e.g., age, gender, ethnicity, language, income, etc.). Hence, it is critical to ensure that transportation infrastructure can sufficiently accommodate this population growth. At the same time, the needs from vulnerable groups of population including, but not limited to, older adults, ethnic minorities, and low-incomes should be properly accommodated.

Recommendation #2: Encouraging Pedestrian-based Travel

As one of the center city communities, the majority of population in Chinatown travel by alternative transportation (e.g., walking, biking, and transit). Therefore, it is important to support pedestrian/cyclist activities for the areas specified in the Chapter 3 and 4. Additionally, the expansion of direct transit service should be considered. It is also important to enhance last-mile connectivity to encourage pedestrian-based travel within, to, and from Chinatown.

Recommendation #3: Promoting Diverse Land Use

The main reason to go to Chinatown is the commercial offerings in place, and commercial land use is really important for Chinatown's vitality. In this regard, commercial land uses need to be supported and increased if possible. Any new development should include these kinds of land uses at the ground level. New developments should facilitate the establishment of this land use providing potential patio space for food/drink uses, display space for retail uses, small commercial unit spaces for multiple tenants rather than a large commercial unit with one tenant, flexibility of commercial units so that they could either be retail or food/drink uses, for example provide potential food/drink making infrastructure with gas and water access.

Recommendation #4: Enhancing Safety

Centre Street and 4th Avenue are high volume streets, and Centre Street passes through Chinatown. Safety of visitors, workers, and residents using non-motorized modes of transportation on these streets should be ensured. Additionally, other safety issues by pedestrian should be addressed (e.g., lighting, crime, etc.).

Recommendation #5: Conducting Comprehensive Preliminary Study

The impact of new development or changes on the community should be studied in a comprehensive way. For instance, prior to any new development in the community, a series of

traffic impact assessments, particularly for local businesses, need to be completed. Additionally, a more detailed parking study (for both short- and long-term) is recommended.

Recommendation #6: Engaging the Community

At all time, the Chinatown community has to be included in the planning process.

7. Appendix

7.1. Survey questionnaire (English)

Chinatown Mobility Plan Project Survey

Survey No. _____; This survey starts at _____.

Section 1: Demographic Information

1. What is your age?

- ☐ Under 18 years ☐ 18 to 24 years ☐ 25 to 34 years ☐ 35 to 44 years
☐ 45 to 54 years ☐ 55 to 64 years ☐ 65 to 79 years ☐ 80 to 99 years
☐ 100 years and over

2. What is your gender?

- ☐ Male ☐ Female ☐ Prefer not to disclose
☐ You don't have an option that applies to me. I identify as _____

3. What is your ethnic origin? (Check all that apply)

- ☐ Chinese ☐ South Asian (e.g., East Indian, Pakistani, Sri Lankan, etc.) ☐ Filipino
☐ Southeast Asian (e.g., Vietnamese, Cambodian, Laotian, Thai, etc.)
☐ West Asian (e.g., Iranian, Afghan, etc.) ☐ Korean ☐ Japanese ☐ European
☐ African ☐ Latin American ☐ Arab ☐ Aboriginal ☐ Other

4. What is your current relationship status?

- ☐ Married ☐ Living with a partner ☐ Single ☐ Other

5. Do you have a child (under 18)? If so, how many?

- ☐ Yes, _____ ☐ No

6. What is your current employment status? (Check all that apply)

- ☐ Employed full time ☐ Employed part time ☐ Self-employed full time
☐ Self-employed part time ☐ Student ☐ Full time homemaker
☐ Disabled/unable to work ☐ Unemployed ☐ Retired ☐ Other

7. How many years have you lived in Calgary?

- ☐ Born in Calgary ☐ Less than a year ☐ 1 to 3 years ☐ 3 to 5 years
☐ 5 to 10 years ☐ More than 10 years

8. How are you associated/connected with Chinatown? (Check all that apply)

- ☐ Chinatown Resident ☐ Chinatown Business Owner ☐ Chinatown worker
☐ Downtown (local) worker ☐ Resident of Community nearby ☐ Casual Visitor
☐ Tourist ☐ Other (specify): _____

***Note: If you are a Chinatown resident, business owner, or worker, please complete the section 2. If you are a visitor to Chinatown, please complete the section 3.**

Section 2: Travel Behavior for Chinatown residents, business owners, workers

1. How long have you lived, run your business, or worked in Chinatown?

☐ Less than a year ☐ 1 to 3 years ☐ 3 to 5 years ☐ 5 to 10 years ☐ More than 10 years

2. What is the primary mode of transportation for your regular day?

☐ Car (Driver) ☐ Car (Passenger) ☐ Uber/Taxi ☐ CTrain ☐ MAX (rapid transit)
☐ Bus ☐ Motorcycle ☐ Bike ☐ Lime/Bird (e-bike or scooter) ☐ Walk
☐ Other (specify): _____

3. What are the most important factors for using the mode of transportation above? (select up to three)

☐ Convenience ☐ Cost ☐ Travel time ☐ Bus waiting time
☐ Availability of parking ☐ Cost of parking ☐ Access to a car for emergencies
☐ Car required for work ☐ Environment concern ☐ Weather
☐ Do not own a car ☐ No transit available ☐ Personal health
☐ Other (specify): _____

4. What transportation system improvements would you like to have in and around Chinatown? (select up to three)

☐ Widening existing roadways
☐ Building more parking lots
☐ Reducing parking cost
☐ Adding new bus routes
☐ Improving bus service with more frequent service
☐ Extending a rapid transit system to Chinatown (e.g., Max Purple)
☐ Building more bike lanes and separated bikes lanes and multi-use pathways
☐ Providing bike parking at key destinations
☐ Improving pedestrian facilities (e.g., sidewalk, street furniture, street lights, etc.)
☐ Lowering speed limits for existing roadways
☐ Other (specify): _____

Section 3: Travel Behavior for Chinatown visitors

1. Where do you live? Please enter your first three digits of the primary home postal code (for example: T2N). _____

2. How often do you visit Chinatown?

☐ Daily ☐ Weekly ☐ Bi-weekly ☐ Monthly ☐ Quarterly ☐ Yearly
☐ First time

3. If you frequently visit to Chinatown, how long do you usually stay in Chinatown?

☐ Less than 30 minutes ☐ 30 minutes to 1 hour ☐ 1 to 2 hours ☐ 2 to 3 hours
☐ More than 3 hours ☐ N/A

4. What amenities or features would make you visit Chinatown? (select up to three)

- ☐ Ethnic resources (e.g., museum, atmosphere, streetscape, buildings, etc.)
- ☐ Customer amenities (e.g., food, retail, entertainment, etc.)
- ☐ Social amenities and services (e.g., community associations, cultural classes, etc.)
- ☐ Proximity (e.g., the city centre)
- ☐ Accessibility to river/park/pathway nearby
- ☐ Other (specify): _____

*Note: You will be asked three questions about TODAY's trip to Chinatown.

5. What is your main purpose of visit to Chinatown **TODAY**? (Check all that apply)

- ☐ Dining ☐ Shopping ☐ Socializing ☐ Business/work meeting ☐ Sightseeing
- ☐ Passing through ☐ Other (specify): _____

6. What is the primary mode of transportation to come to Chinatown **TODAY**?

- ☐ Car (Driver) ☐ Car (Passenger) ☐ car2go ☐ Uber/Taxi ☐ CTrain
- ☐ MAX (rapid transit) ☐ Bus ☐ Motorcycle ☐ Bike ☐ Lime/Bird (e-bike or scooter)
- ☐ Walk ☐ Other (specify): _____

7. What are the most important factors for using the mode of transportation above **TODAY**? (select up to three)

- ☐ Convenience ☐ Cost ☐ Travel time ☐ Bus waiting time
- ☐ Availability of parking ☐ Cost of parking ☐ Access to a car for emergencies
- ☐ Car required for work ☐ Environment concern ☐ Weather
- ☐ Do not own a car ☐ No transit available ☐ Personal health
- ☐ Other (specify): _____

*Note: You will be asked four questions about your trip to Chinatown in general.

8. What is your main purpose of visit to Chinatown **IN GENERAL**? (Check all that apply)

- ☐ Dining ☐ Shopping ☐ Socializing ☐ Business/work meeting ☐ Sightseeing
- ☐ Passing through ☐ Other (specify): _____

9. What is the primary mode of transportation to come to Chinatown **IN GENERAL**?

- ☐ Car (Driver) ☐ Car (Passenger) ☐ car2go ☐ Uber/Taxi ☐ CTrain
- ☐ MAX (rapid transit) ☐ Bus ☐ Motorcycle ☐ Bike ☐ Lime/Bird (e-bike or scooter)
- ☐ Walk ☐ Other (specify): _____

10. What are the most important factors that influence your choice of transportation **IN GENERAL**? (select up to three)

- ☐ Convenience ☐ Cost ☐ Travel time ☐ Bus waiting time
- ☐ Availability of parking ☐ Cost of parking ☐ Access to a car for emergencies
- ☐ Car required for work ☐ Environment concern ☐ Weather
- ☐ Do not own a car ☐ No transit available ☐ Personal health
- ☐ Other (specify): _____

11. What transportation system improvements would you like to have in and around Chinatown? (select up to three)

- ☐ Widening existing roadways
- ☐ Building more parking lots
- ☐ Reducing parking cost
- ☐ Adding new bus routes
- ☐ Improving bus service with more frequent service
- ☐ Extending a rapid transit system to Chinatown (e.g., Max Purple)
- ☐ Building more bike lanes and separated bikes lanes and multi-use pathways
- ☐ Providing bike parking at key destinations
- ☐ Improving pedestrian facilities (e.g., sidewalk, street furniture, street lights, etc.)
- ☐ Lowering speed limits for existing roadways
- ☐ Other (specify): _____

Section 4: Chinatown & Green Line

1. If there was an LRT station (Green Line) in or near Chinatown, would you use CTrain or come to Chinatown by CTrain?

- ☐ Absolutely ☐ Most likely ☐ Perhaps ☐ Not really ☐ Not at all

2. If you answered **“Yes,”** what are the most important factors for using the CTrain? (select up to three)

- ☐ Convenience ☐ Affordability ☐ Availability ☐ Reliability ☐ Efficiency
☐ Environment Concern ☐ Personal health ☐ Safety Reason ☐ N/A
☐ Other (specify): _____

3. If you answered **“No,”** what is are the most important factors for not using the CTrain? (select up to three)

- ☐ Inconvenience ☐ Unaffordability ☐ Unreliability ☐ Inefficiency
☐ Safety Reason ☐ N/A ☐ Other (specify): _____

* If you like to enter in the prize draw (one \$50 gift card & two \$25 gift cards), please provide us your email address or phone number to be notified.
